The Legend of Mercury-Jeffrey L. Rodengen 1998 Sixty years old in 1999, Mercury Marine is the world leader in the marine industry. The memory of its founder, Carl Kiekhaefer, lives on in the hearts and minds of engineers and boat enthusiasts alike. His manic genius and tireless energy found outlet in his need for greater speed, more features and higher value, first in outboards and then in stern drive products. Since Kiekhaefer's departure from the company in 1970, Mercury Marine has come into its own while holding onto those qualities inherited from its founder, qualities that abhor failure. Jeffrey L. Rodengen, author of Iron Fist: The Lives of Carl Kiekhaefer, continues to chronicle the fascinating story of Mercury Marine. Mission to Jupiter-National Aeronautics Administration 2013-11 The Galileo mission to Jupiter explored an exciting new frontier, had a major impact on planetary science, and provided invaluable lessons for the design of spacecraft. This mission amassed so many scientific firsts and key discoveries that it can truly be called one of the most impressive feats of exploration of the 20th century. In the words of John Casani, the original project manager of the mission, "Galileo was a way of demonstrating . . . just what U.S. technology was capable of doing." An engineer on the Galileo team expressed more personal sentiments when she said, "I had never been a part of something with such great scope. . . . To know that the whole world was watching and hoping with us that this would work. We were doing something for all mankind." When Galileo lifted off from Kennedy Space Center on 18 October 1989, it began an interplanetary voyage that took it to Venus, to two asteroids, back to Earth, and finally on to Jupiter. The craft's instruments studied Jupiter's enormous magnetosphere and its belts of intense radiation. The spacecraft also sent off a planetary probe that accomplished the most difficult atmospheric entry ever attempted. After this, the craft spent years visiting Jupiter's moons and delving into their structures and properties. This book attempts to convey the creativity, leadership, and vision that were necessary for the mission's success. It is a book about dedicated people and their scientific and engineering achievements. The Galileo mission faced many significant problems. Some of the most brilliant accomplishments and "work-arounds" of the Galileo staff occurred precisely when these challenges arose. Throughout the mission, engineers and scientists found ways to keep the spacecraft operational from a distance of nearly half a billion miles, enabling one of the most impressive voyages of scientific discovery.

Floating Coast: An Environmental History of the Bering Strait-Bathsheba Demuth 2019-08-20 A groundbreaking exploration of the relationship between capitalism, communism, and Arctic ecology since the dawn of the industrial age. Whales and walruses, caribou and fox, gold and oil: through the stories of these animals and resources, Bathsheba Demuth reveals how people have turned ecological wealth in a remote region into economic growth and state power for more than 150 years. The first-ever comprehensive history of Beringia, the Arctic land and waters stretching from Russia to Canada, Floating Coast breaks away from familiar narratives to provide a fresh and fascinating perspective on an overlooked landscape. The unforgiving territory along the Bering Strait had long been home to humans—the Inupiat and Yupik in Alaska, and the Yupik and Chukchi in Russia—before Americans and Europeans arrived with revolutionary ideas for progress. Rapidly, these frigid lands and waters became the site of an ongoing experiment: How, under conditions of extreme scarcity, would the great modern ideologies of capitalism and communism control and manage the resources they craved? Drawing on her own experience living with and interviewing indigenous people in the region, as well as from archival sources, Demuth shows how the social, the political, and the environmental clashed in this liminal space. Through the lens of the natural world, she views human life and economics as fundamentally about cycles of energy, bringing a fresh and visionary spin to the writing of human history. Floating Coast is a profoundly resonant tale of the dynamic changes and unforeseen consequences that immense human needs and ambitions have brought, and will continue to bring, to a finite planet.
