Proceedings of the First Symposium on Aviation Maintenance and Management-Volume I-Jinsong Wang 2014-03-18 Proceedings of the First Symposium on Aviation Maintenance and Management collects selected papers from the conference of ISAMM 2013 in China held in Xi'an on November 25-28, 2013. The book presents state-of-the-art studies on the aviation maintenance, test, fault diagnosis, and prognosis for the aircraft electronic and electrical systems. The selected works can help promote the development of the maintenance and test technology for the aircraft complex systems. Researchers and engineers in the fields of electrical engineering and aerospace engineering can benefit from the book. Jinsong Wang is a professor at School of Mechanical and Electronic Engineering of Northwestern Polytechnical University, China.

The Discipline of Organizing: Professional Edition-Robert J. Glushko 2016-08-05 We organize things. We organize information, information about things, and information about information. Organizing is a fundamental issue in many professional fields, but these fields have only limited agreement in how they approach problems of organizing and in what they seek as their solutions. The Discipline of Organizing synthesizes insights from library science, information science, computer science, cognitive science, systems analysis, business, and other disciplines to create an Organizing System for understanding organizing. This framework is robust and forward-looking, enabling effective sharing of insights and design patterns between disciplines that weren't possible before. The 4th edition of this award-winning and widely adopted text adds content to bridge between the foundations of organizing systems and the new statistical and computational techniques of data science because at its core, data science is about how resources are described and organized. The 4th edition reframes descriptive statistics as organizing techniques, expands the treatment of classification to include computational methods, and incorporates many new examples of data-driven resource selection, organization, maintenance, and personalization. The Professional edition remains the definitive source for advanced students and practitioners who require comprehensive and pinpoint connections to the classic and contemporary literature about organizing. Dozens of new citations and endnotes for the new data science material bring to 12 the number of distinct disciplinary perspectives identified in the book.

The Discipline of Organizing-Robert J. Glushko 2013 This book offers a framework for the theory and practice of organising that integrates information organisation (IO) and information retrieval (IR), bridging the disciplinary chasms between Library and Information Science and Computer Science, each of which views and teaches IO and IR as separate topics and in substantially different ways.

New Materials for Next-Generation Commercial Transports-National Research Council 1996-04-15 The major objective of this book was to identify issues related to the introduction of new materials and the effects that advanced materials will have on the durability and technical risk of future civil aircraft throughout their service life. The committee investigated the new materials and structural concepts that are likely to be incorporated into next generation commercial aircraft and the factors influencing application decisions. Based on these predictions, the committee attempted to identify the design, characterization, monitoring, and maintenance issues that are critical for the introduction of advanced materials and structural concepts into future aircraft.

Forensic Engineering-Kenneth L. Carper 1998-04-01 Forensic Engineering comprehensively summarizes forensic activity and failure investigation in engineering, providing illustrative case studies and investigative techniques.

Contributors are the foremost authorities in such fields as fire investigation, industrial accidents, product liability, traffic accidents, civil engineering, transportation disasters, and environmental systems failures - demonstrating the diverse spectrum of forensic experience. The book outlines the nuts-and-bolts aspects of forensic engineering as well as examines specific details for improving investigative procedures and analytical techniques. Forensic Engineering also describes methods in litigation and alternative dispute resolution, such as arbitration, mediation, mini-trials, and more. Richly illustrated with case studies from various fields, each chapter includes guidelines, techniques, methods, and tools for accident investigation and analysis. The text includes vital information on using forensic photogrammetry, planning and writing reports, serving as an expert witness in traditional litigation, and resolving disputes. Providing proven formulas and thought-provoking concepts, Forensic Engineering enables forensic experts in all engineering fields, design and construction professionals, attorneys, product manufacturers, insurance professionals, and engineering and law students to maximize their investigative skills and litigation abilities.

Risk Management and Error Reduction in Aviation Maintenance-Manoj S. Patankar 2004 Although several U.S. and European airlines have started providing human factors training to their maintenance personnel, the academic community (some 300 academic programs in the United States and several others in Europe and Asia) has not yet started offering formal human factors education to maintenance students. The highly respected authors strongly believe in incorporating the human factors principles in aviation maintenance. This is the first of two volumes providing effective behavioural guidance on risk management in aviation maintenance for both the novice and the experienced maintenance personnel. Its practical guidelines assist both student and practising aviation maintenance personnel to develop sustainable safety culture. For the maintenance community it provides some theoretical discussion about the "Why?" for risk management and then focus on the "How?" to implement a successful error reduction program. To help the maintenance community in making a strong case to their financial managers, the authors also discuss the return on investment for risk management programs. The issue of risk management is taken at two levels. First, it provides a basic awareness information to those who have little or no knowledge of maintenance human factors. Second, it provides a set of practical tools for the more experienced people so that they can be more effective in risk management and error recovery in their jobs. This invaluable book serves as a practical guide as well as an academic textbook. The book covers fundamental human factors principles from a risk management perspective. Upon reading this informative book, the audience will be able to apply the basic principles of risk management to aviation maintenance environment, and they will be able to use low-risk behaviours in their daily work.
