Wilmshurst provides 25 real-life cases to give readers a deeper understanding of a wide range of disorders within the context of the DSM-5. As they explore complex cases, readers learn to integrate theory into research-based assessments and interventions. Each case provides opportunities to practice clinical skills in the assessment, diagnosis, and treatment of childhood disorders from a number of theoretical perspectives and at various levels of interest and expertise. Case Studies in Child and Adolescent Psychopathology-DeDe Wohlfarth 2017-03-14 The second edition of Case Studies in Child and Adolescent Psychopathology expands on the case study approach utilized in the first edition, providing engaging narratives of clients with rich backgrounds and complex family situations. Because the answers to important real-world questions are often nuanced, contextual, and tentative—unlike the idealistic scenarios presented in most textbooks—these case studies contain ethical lapses, clinical mistakes, confusing diagnostic presentations, unevenly applied approaches, and sometimes unhappy endings. These real-life portrayals of clients help students learn the skills they will need to be successful in the mental health field. Critical thinking questions designed to develop objective analysis and evaluation skills are embedded throughout the cases, which can be used in individual, group, or online formats. This problem-based learning approach challenges readers to create accurate case conceptualizations and evidence-based treatment plans. The cases utilize the International Statistical Classification of Diseases and Related Health Problems and the Diagnostic and Statistical Manual of Mental Disorders. The current research applied in the case studies serves to deepen the understanding of the etiology and treatment of these disorders. The latest edition emphasizes culture, race, and ethnicity in psychotherapy, featuring both children and mental health providers who represent a wide variety of cultural backgrounds.

School refusal behavior can contribute to a child's academic, social, and psychological problems, impact a child's chances for future educational, financial, and personal success, and significantly affect family functioning. Cognitive Behavioral Therapy (CBT) has been shown to be a highly effective treatment for youth who exhibit this behavior. This Therapist Guide outlines four treatment protocols based on CBT principles that can be used to effectively address the main types of school refusal behavior. The Guide concentrates on four primary reasons why children typically refuse school to relieve school-related distress, to avoid negative social or evaluative situations at school, to receive attention from a parent or a significant other, and to obtain tangible rewards outside of school This manual includes tools for assessing a child's reasons for school refusal behavior and is based on a functional, prescriptive model. It presents well-tested techniques arranged by function to tailor treatment to a child's particular characteristics. Each treatment package also contains a detailed discussion of special topics pertinent to treating youths with school refusal behavior, such as medication, panic attacks, and being teased. A corresponding workbook is also available for parents, who often play an important part in a child's recovery. Pediatric Neuropsychiatry-Aaron J. Hauptman 2018-10-26 Adult neuropsychiatry is now a well-established field with numerous reputable references. Practitioners who work with children routinely note how references and practitioners knowledgeable in the equivalent work in the pediatric world are rare. Child psychiatrists and neurologists frequently work with individuals struggling with these conditions and would strongly benefit from such a reference that incorporates medical work-up, psychopharmacological recommendations, family/support recommendations and theoretical pathophysiology. Pediatricians and developmental pediatricians often treat children with behavioral and neuropsychiatric sequelae, but are not well-trained in the neuropsychiatric management of these cases. Neuropsychologists and educational psychologists working with children and adults with pediatric-onset conditions will also find the text helpful to contextualize their cases, better-understand the medical evaluation and management and perhaps adjust recommendations that would supplement their own testing methods. Finally, subspecialists in adult neurology, psychiatry and neuropsychiatry often find themselves working with these children by default as there are few pediatric subspecialists who are available to accept them into practice. When facing complex neuropsychiatric illness in children, many clinicians are stymied because they may have "never seen a case like that". This text fills the wide gap that currently exists and helps move this field forward. The approach utilized in adult neuropsychiatry that is both clear and accessible does not yet have an equivalent in the pediatric realm, but there is tremendous interest in its development. Children and adolescents with neuropsychiatric conditions are very common and they and their caregivers often struggle to find professionals well educated in this field. Ultimately, a wide range of clinicians will find this text to be a very helpful resource for diagnosis and management in the spectrum of pediatric neuropsychiatric conditions. The case-based approach is also unique with respect to

neuropsychiatric approaches, and the clear cut, reader-friendly approach of such a format would likely be well-received among physicians looking for a resource on this issue.

The American Psychiatric Association Practice Guidelines for the Psychiatric Evaluation of Adults, Third Edition-American Psychiatric Association 2015-07-29 Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context.

Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.

Casebook of Interpersonal Psychotherapy-John C. Markowitz 2012-02-23 Interpersonal psychotherapy (IPT), an empirically validated treatment for depression and other disorders, is becoming more frequently used to treat a range of psychiatric diagnoses. Based on evidence that interpersonal problems contribute to the onset of psychiatric disorders, IPT helps patients to change interpersonal behavior in order to improve psychosocial functioning and relieve symptoms. IPT both relieves psychiatric symptoms and helps to build social skills. Bringing together experts who have treated patients with and conducted clinical research on IPT, the Casebook of Interpersonal Psychotherapy responds to the growing need for a foundational text to supplement the available manuals on IPT. The Casebook provides a wealth of real life treatment material, and illustrates the use of IPT in the hands of expert psychotherapists treating patients with a range of conditions and complications in different IPT treatment formats. The detailed cases give a sense of how IPT proceeds and how it works. Chapter authors describe specific adaptations of IPT for patients with particular disorders, including mood disorders, anxiety disorders, eating disorders, and personality disorders. The book also covers different contexts in which IPT may be practiced, including group therapy, inpatient settings, and telephone therapy. The Casebook of Interpersonal Psychotherapy is an invaluable resource for psychiatrists, psychologists, social workers, psychiatric nurses, and other mental health professionals interested in psychotherapy.
