Inside, you will find over 100 full-color figures and tables illustrating the most important concepts, Anatomy & Physiology, organized high-yield abbreviations, must know medications, must know imaging modalities, and high-yield specialty-specific pathology. About the Author After graduating with a Bachelor of Science in Biology from the University of North Carolina at Chapel Hill and prior to enrolling in medical school, my job search brought me back home to Atlanta where I accepted a position as an Ophthalmic Medical Scribe. I had no prior experience as a scribe or in the healthcare field, but I knew that quickly improving my understanding of ophthalmology would be essential for my success. I searched the web to obtain every piece of relevant ophthalmology information that I could find, and I spent hours experimenting with the functionalities of the eye clinic's electronic medical record to better prepare myself for my new role. However, I found that it took a significant amount of time and effort to sift through the excessive online information before I was able to hone in on the relevant material. Due to the lack of designated ophthalmic medical scribe training resources and the vast amount of irrelevant information online, I decided that the creation of The Ophthalmic Scribe Manual was warranted. With over 3 years of scribing experience and over 20,000 patient encounters, as well as having published a variety of first author case reports and review articles in prominent ophthalmic medical journals, I am confident that my experiences will offer an immediate benefit to those seeking to excel in this rewarding profession. Review "Very well-written! This looks terrific and will be great for widespread use particularly in training programs, especially with the growing need for trained ophthalmic personnel."

Now Chris Holland and Jack Shostak have updated their popular Implementing CDISC Using SAS, the first comprehensive book on applying clinical research data and metadata to the Clinical Data Interchange Standards Consortium (CDISC) standards. Viscoelastics in Ophthalmic Surgery-H.B. Dick 2012-12-06 It will be difficult to find an ophthalmic surgeon who will gladly do his work entirely without viscoelastics. Within just a few years this group of substances has enlarged the field

of ophthalmic surgery enormously. Many procedures have become safer and simpler and other techniques could only be developed because of the availability of visco elastics. Especially cataract surgery and implantation of intraocular lenses have benefitted. Implantation of an intraocular lens can be performed much more reliably into the capsular bag without endangering the posterior capsule. Implantation of foldable lenses would be almost impossible without visco elastics. However, other surgical maneuvers also necessitate visco elastics, especially when the anterior chamber must be maintained, the corneal endothelium must be protected and delicate tissues must be manipulated. A corneal transplant can be sutured safely into the recipient corneal ring using visco elastics. Even in glaucoma surgery, visco elastics gain importance as they are being used in trabeculectomy or in deep sclerectomy with additional viscocanalostomy. But which substance is best for which purpose? Just as much as a basic pharmacological knowledge is necessary for a rational use of drugs, in-depth knowledge of physicochemical properties and objective investigations are prerequisites for a logical selection of visco elastics from an ever increasing number of available substances.
