Dictionary of Pharmacovigilance-Amer Alghabban 2004 Pharmacovigilance is, in essence, the process of monitoring the everyday use of medicines to identify previously unrecognized adverse drug reactions thereby assessing their risk/benefit balance in order to determine what action, if any, is necessary to improve their safe use by providing information to users to optimize safe and effective use while monitoring the impact of any action taken. The discipline along with its operational and legal facets, for both regulatory authorities and pharmaceutical industry, envelop colossal terminology that has precise legal and scientific significance. Such terminology may vary from country to country, or more confusingly, different countries may use identical or similar abbreviations, terms or phrases to mean different entities. This dictionary contains a list of abbreviations, terms and phrases (in English) giving definitions of commonly (and rarely) encountered pharmacovigilance terms.

Dictionary of Pharmaceutical Medicine-Gerhard Nahler 2010-03-14 In the beginning was the word – and the foreword. Words are c- bined to sentences and eventually language. Words are listed in a dictionary and their meaning in building language are explained in a lexicon. In the life sciences – e. g. drug development sciences and pharmaceutical medicine – the analogies are evidenced by the - nomic library and patho-physiological function as the lexicon. In this transition from code to function integrated lexica pay a pivotal role for a faster understanding. The present updated version of this books combines dictionary and lexicon and provides the translational - derstanding of the complex drug development process. With a large number of new terms, their abbreviations and explanations in this complex interdisciplinary process a great number of different dis- plines and specialists need to be informed: they include physicians, pharmacists, biologists, chemists, biostatisticians, data managers, - formation specialists, business developers, marketing experts as well as regulators, financing specialists, healthcare providers and ins- ers in a continuous professional development mode. This lexicon is therefore a most suitable and economical tool for fast and conclusive information for all key-players in the development of medicines at the working place, in postgraduate training as well as during graduate education. This book is an indispensable aid in any medical library. Prof. Dr. med. Dr. h. c. Fritz R.

Pharmacy in World War II-Dennis B Worthen 2004-05-07 Get an inside look at the lives of military and civilian pharmacists during wartime! Pharmacy in World War II is a comprehensive history of American pharmacy, both in the military and on the home front, from 1941 to 1945. The book provides a unique insight into the profession, the practice, and its practitioners through the memories of those who served as pharmacist mates, corpsmen, or civilian pharmacists. Through accounts recorded in publications, stored in archives, or told first-hand, you'll learn about the fight to establish an Army Pharmacy Corps, the work of the Selective Service committees to preserve an adequate pool of pharmacists for civilian practice, the bond drives that would buy hospital airplanes and trains, and a great deal more. Pharmacy in World War II also looks at the organizational, economic, educational, professional, and societal issues that molded pharmacy during a watershed in modern American history. Author Dennis B. Worthen, editor-in-chief of Haworth's Pharmaceutical Heritage book series, compiled a database of more than 11,000 pharmacists, pharmacy students, and veterans in pharmacy school during wartime as part of the “Memories Project” that recalls the activities of the professional, trade, and educational institutions of pharmacy, their goals and development, and their interactions, agreements, and differences. The book examines the fight for an Army Pharmacy Corps, shortages and rationing on the home front, manpower shortages, the impact of the Selective Service, and the prevalent attitude in the military that pharmacy was a business, not a learned profession, and that pharmaceutical services could be learned with 90 days of training. Pharmacy in World War II includes memories of: pharmacy in the pre-World War II years pharmacy education the Selective Service the drugstore's role in the war effort the Pharmacy Corps returning veterans The book also includes photographs and images as well as appendices listing colleges and schools of pharmacy, Selective Service pharmacy advisory committees, pharmacy organizations and leaders, extracts from Army medical departments supply catalogs, and pharmacists and pharmacy students who died in the war. Pharmacy in World War II is an invaluable document for pharmacy students, practitioners, and educators, and for students of American history.

Pharmaceutical Freedom-Jessica Flanigan 2017-07-03 If a competent adult refuses medical treatment, physicians and public officials must respect her decision. Coercive medical paternalism is a clear violation of the doctrine of informed consent, which protects patients' rights to make medical decisions even if a patient's choice endangers her health. The same reasons for rejecting medical paternalism in the doctor's office are also reasons to reject medical paternalism at the pharmacy, yet coercive medical paternalism persists in the form of premarket approval policies and prescription requirements for pharmaceuticals. In Pharmaceutical Freedom Jessica Flanigan defends patients' rights of self-medication. Flanigan argues that public officials should certify drugs instead of enforcing prohibitive pharmaceutical policies that disrespect people's rights to make intimate medical decisions and prevent patients from accessing potentially beneficial new therapies. This argument has revisionary implications for important and timely debates about medical paternalism, recreational drug legalization, human enhancement, prescription drug prices, physician assisted suicide, and pharmaceutical marketing. The need for reform is especially urgent as medical treatment becomes increasingly personalized and patients advocate for the right to try. The doctrine of informed consent revolutionized medicine in the twentieth century by empowering patients to make treatment decisions. Rights of self-medication are the next step.

Registries for Evaluating Patient Outcomes-Agency for Healthcare Research and Quality/AHRQ 2014-04-01 This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.
