Short Cases in Clinical Medicine-A. B. M. ABDULLAH 2013-11-25 A helpful learning manual for undergraduates and PG students preparing for FCPS, MD, MRCP, FRACP or any other equivalent exam in Internal Medicine.A completely new section (Section B) is included. The first section (Section A) contains short clinical cases, followed by relevant questions, their answers and brief discussions. Section B contains Data Interpretation, ECG, X-ray, coloured photograph of common diseases and few instruments, which are helpful for undergraduate students. An easy book to learn the approach to diagnosis and management of common short cases. Cases have been described in the way a student is expected to approach a medical situation in examinations as well as in day-to-day practice. Provides short notes on various common diseases, which will help the students to get a comprehensive knowledge without going through extensive textbooks. Have about 700 colored photographs and a few X-rays, CT scans, etc. to help students to develop a good clinical eye. Easy to understand, concise, yet full of necessary information.

Biological Methylation and Drug Design-Ronald T. Borchardt 1986-04-15 This book has been developed from its earlier and far less formal presentment as the proceedings of a symposium entitled The Biochemistry of S-Adenosylmethionine as a Basis for Drug Design that was held at the Solstrand Fjord Hotel in Bergen, Norway on June 30-July 4, 1985. The purpose of the symposium was to bring together scientists from various disciplines (biochemistry, pharmacology, virology, immunology, chemistry, medicine, and so on) to discuss the recent advances that have been made in our understanding of the biological roles of S adenosylmethionine (AdoMet) and to discuss the feasibility of utilizing AdoMet-dependent enzymes as targets for drug design. Thus the information provided herein will be of value not only to basic scientists involved in elucidating the role of AdoMet in biology, but also to medicinal chemists who are using this basic knowledge in the process of drug design. The volume should also be of interest to pharmacologists and clinicians involved in biological evaluation of potential therapeutic agents arising from the efforts of the biochemists and medicinal chemists. Each plenary speaker at the symposium was requested to submit a chapter reviewing recent contributions of their discipline to our base of knowledge about the biological role of AdoMet. Topics covered in this volume include protein and phospholipid methylations (Section A), nucleic acid methyl ations (Section B), the regulation of AdoMet, S-adenosylhomocysteine, and methylthioadenosine metabolism (Section C), clinical aspects of AdoMet (Section D), and the design, synthesis, and biological evaluation of trans methylation inhibitors (Section E).

Nonlinear Stochastic Operator Equations-George Adomian 2014-05-09 Nonlinear Stochastic Operator Equations deals with realistic solutions of the nonlinear stochastic equations arising from the modeling of frontier problems in many fields of science. This book also discusses a wide class of equations to provide modeling of problems concerning physics, engineering, operations research, systems analysis, biology, medicine. This text discusses operator equations and the decomposition method. This book also explains the limitations, restrictions and assumptions made in differential equations involving stochastic process

coefficients (the stochastic operator case), which yield results very different from the needs of the actual physical problem. Real-world application of mathematics to actual physical problems, requires making a reasonable model that is both realistic and solvable. The decomposition approach or model is an approximation method to solve a wide range of problems. This book explains an inherent feature of real systems—known as nonlinear behavior—that occurs frequently in nuclear reactors, in physiological systems, or in cellular growth. This text also discusses stochastic operator equations with linear boundary conditions. This book is intended for students with a mathematics background, particularly senior undergraduate and graduate students of advanced mathematics, of the physical or engineering sciences.

Blue Ridge Parkway-Pat Blackley 2008 This book feeatures the finest images of the parkway by photography team Pat and Chuck Blackley, from grand scenics of the Peaks of Otter to close-ups of delicate trillium. Cara Ellen Modisett's inspired writing offers insight into the history, culture, and natural beauty of a place she has visited since her youth.

Short Cases in Clinical Exams of Internal Medicine-Wanis Hamad Ibrahim 2016-10-31 Clinical cases in internal medicine with model answers to assist trainees in exam preparation. Presented in conversation style between examiner and candidate to resemble exam conditions. Includes mnemonics to help students recall long lists.

Compressible Fluid Flow-Michel A. Saad 1993 This reference develops the fundamental concepts of compressible fluid flow by clearly illustrating their applications in real-world practice through the use of numerous worked-out examples and problems. The book covers concepts of thermodynamics and fluid mechanics which relate directly to compressible flow; discusses isentropic flow through a variable-area duct; describes normal shock waves, including moving shock waves and shock-tube analysis; explores the effects of friction and heat interaction on the flow of a compressible fluid; covers two-dimensional shock and expansion waves; provides a treatment of linearized flow; discusses unsteady wave propagation and computational methods in fluid dynamics; provides several numerical methods for solving linear and nonlinear equations encountered in compressible flow; offers modern computational methods for solving nonintegrable equations; and describes methods of measurement in high-speed flow. Suitable for the practicing engineer engaged in compressible-flow applications.

Circadian Rhythms and Metabolism-Etienne Challet 2017-09-18 One of the major breakthroughs of the last decade in the understanding of energy homeostasis is the identification of a reciprocal control between circadian rhythmicity and cellular metabolism. Circadian rhythmicity is a fundamental endogenous process of almost every organism living on Earth. For instance, the alternation of hunger and satiety is not continuous over 24 h, but is instead structured in time along the light/dark cycle. In mammals, the temporal organization of metabolism, physiology and behavior around 24 h is controlled by a network of multiple cellular clocks, synchronized via neuronal and hormonal signals by a master clock located in the suprachiasmatic nuclei of the hypothalamus. This central circadian conductor in the brain is mainly reset by ambient light perceived by the retina, while secondary circadian clocks in other brain areas and peripheral organs can be reset by meal timing. Chronic disruption of circadian rhythms, as seen in human shift-workers (up to 20% of the active population), has been associated with the development of a number of adverse mental and metabolic conditions. Understanding of the functional links between circadian desynchronization and overall health in animal models and humans, however, is still scarce. Interactions between circadian clocks and metabolism can occur at different levels: the molecular clockwork, internal synchronization via neuro-hormonal signals, or external synchronization via photic or feeding cues. This Research Topic comprises a number of reviews as well as research and methods articles that feature recent advancements in the mechanisms linking circadian clocks with energy metabolism, and the pathophysiological implications of these interactions for metabolic health.

Long Cases in Clinical Medicine-ABM Abdullah 2019-05-14 Presents trainees with detailed clinical cases for numerous diseases and disorders covering various body systems including respiratory, gastroenterology, neurology and haematology. Questions and answers are provided at the end of each case.

250 Cases in Clinical Medicine E-Book-Ragavendra R. Baliga 2012-01-27 A new, fully updated edition of Baliga's very popular collection of short cases arranged by clinical area, emphasising the key diagnostic features of clinical conditions as commonly presented in the short-case part of the Final MB and MRCP examinations. Also included are likely instructions or commands expected from the examiner for each condition, and the key points which the candidate must tell the examiner. A must-have for the final-year undergraduate and trainee doctor. From customer reviews of the previous edition: 'This book is the most useful

guide that money can buy for the final exams in the current MBChB undergraduate course. It covers important areas of clinical medicine in a question based format and highlights classical scenarios. The questions raised are classical of examiners in the long and short case examinations. This is a must buy for any undergraduate medical student!!!' 'The book is a must during the period that the young doctor or student is on the wards. It allows one to focus on the important physical findings and the relavant clinical pearls associated with the different medical conditions met... It discusses important physical findings and their diagnostic importance. I have found it useful in preparing for attending ward rounds and also for sharpening my clinical skills. The discussion section is well organised such that undergraduates as well as postgraduates can benefit and the material is up to date with good references for further reading.' 'Excellent preparation for finals as well the MRCP ...MUST HAVE before MRCP PACES.' Features Ideal for use in the ward. Each of the 250 cases presents a disease or topic which is covered consistently to address:● salient features ● history ● examination ● diagnosis ● questions covering investigations and differentiations ● advanced-level questions ● management. New to this edition: Over 350 new images Enhanced advanced-level questions Many more tables
The New Evangelization and You-Greg Willits 2013 Willits is passionate about helping Christians share their faith. He's explored all kinds of ways to reach out-- from radio and TV to various forms of social media--and he's learned a lot about what works and what doesn't.
Stochastic Systems-Adomian 1983-07-29 Stochastic Systems
Nonlinear Stochastic Systems Theory and Applications to Physics-G. Adomian 1988-12-31 Approach your problems from the right end and begin with the answers. Then one day, perhaps you will find the final answer. "The Hermit Clad In Crane Feathers" In R. van Gullk's The Chinese Haze Hurders. It Isn't that they can't see the solution. It IS that they can't see the problem. G. K. Chesterton. The Scandal of Father Brown. "The POint of a Pin." Growing specialization and diversification have brought a host of monographs and textbooks on increasingly specialized topics. However, the "tree" of k now ledge of m athemat i cs and re I ated fie I ds does not grow only by putting forth new branches. It also happens, quite often in fact, that branches which were thought to be completely disparate are suddenly seen to be related. Further, the kind and level of sophistication of mathematics applied in various sciences has changed drastically in recent years: measure theory is used (non-trivially) in regional and theoretical economics; algebraic geometry interacts with physics; the Minkowsky lemma, COding theory and the structure of water meet one another in packing and covering theory; quantum fields, crystal defects and mathematical programming profit from homotopy theory; Lie algebras are relevant to filtering; and prediction and electrical engineering can use Stein spaces. And In addition to this there are such new emerging subdisciplines as "experimental mathematics", "CFD", "completely Integrable systems", "chaos, synergetics and large-scale order", which are almost impossible to fit into the eXisting classificatIOn schemes.
Short Cases in Clinical Medicine E-Book-A B M Abdullah 2018-08-28 AThis book will serve as a helpful learning manual for undergraduate and PG students preparing for MBBS, FCPS, MD, MRCP, FRACP or any other equivalent examination in internal medicine or any other related subspecialty. An easy book to learn the approach in common short cases with the basic knowledge and skill, essential for presentation and interpretation in any examination. A complete outline of comprehensive medical encounter including physical examination and interpretation of gathered information to formulate a diagnosis. Provides short notes and brief discussions on various common diseases, helpful for a quick review without going through voluminous textbooks. 800 coloured photographs are there to help the students to develop a good clinical eye. Easy to understand, concise, yet full of necessary information. Some new short cases like "Inferior vena caval obstruction," "Tricuspid stenosis," "Pulmonary regurgitation," "Lobectomy and pneumonectomy," "Rheumatoid lung," "Polycythemia Rubra Vera" including many others are added. Also, new investigations and latest treatment protocols of many diseases are added, such as Filariasis, DVT, Atrial fibrillation, pneumothorax, consolidation, Kala-azar etc.
Manuel Castells-Felix Stalder 2006-03-27 First in-depth study of Manuell Castells pioneering work Traces Castells thought from his work on urban change in the 1970s to his recent theories of global social transformations Distills the central ideas in Castells work into an accessible and concise introduction for undergraduate students Explores Castells writings on the network society, informational capitalism and democracy in crisis Provides a critical analysis of Castells thought in relation to ongoing debates about globalization

The Highwayman of Tanglewood-Marcia Lynn McClure 2011-01-01 A chambermaid in the house of Tremeshton, Faris Shayhan well knew torment, despair, and

trepidation. To Faris it seemed the future stretched long and desolate before her-as bleak and dark as a lonesome midnight path. Still, the moon oft casts hopeful luminosity to light one's way. So it was that Lady Maranda Rockrimmon cast hope upon Faris-set Faris upon a different path-a path of happiness, serenity, and love. Thus Faris abandoned the tainted air at Tremeshton in favor of the amethyst sunsets of Loch Loland Castle and her new mistress, Lady Rockrimmon. Further, it was on the very night of her emancipation that Faris first met the man of her dreams-the man of every woman's dreams-the rogue Highwayman of Tanglewood. Dressed in black and astride his mighty steed, the brave, heroic, and dashing rogue Highwayman of Tanglewood stole Faris's heart as easily as he stole her kiss. Yet the Highwayman of Tanglewood was encircled in mystery-mystery as thick and as secretive as time itself. Could Faris truly own the heart of a man so thoroughly enveloped in twilight shadows and mysterious secrets?

ECG in Medical Practice-ABM Abdullah 2014-03-30 New edition helping trainees recognise, interpret and diagnose cardiac abnormalities. Covers normal and abnormal ECG patterns. Includes 150 ECG tracings for trainees to practise.

100 Cases in Obstetrics and Gynaecology-Cecilia Bottomley 2008-01-25 A 24-year-old woman is referred from the emergency department with sudden onset of left iliac fossa pain and you are the medic on duty... 100 Cases in Obstetrics and Gynaecology presents 100 commonly seen obstetric and gynaecological scenarios. The patient's history, examination and initial investigations are presented along with questions on the diagnosis and management of each case. The answer includes a detailed discussion on each topic, providing an essential revision aid as well as a practical guide for junior clinicians. Making clinical decisions is one of the most challenging and difficult parts of training to become a doctor. These cases will teach medics and medical students to recognize important obstetric and gynaecological conditions and help them develop their diagnostic and management skills.

The Trouble with Government-Derek Curtis Bok 2001 The author of "State of the Nation" seeks to determine the main reasons for the failings and frustrations associated with government and offers concrete steps that Americans can take to become politically engaged and to help the United States to improve its performance. 3 tables.

Education and the Scottish People, 1750-1918-Robert David Anderson 1995 This text examines the distinctive characteristics of Scottish education and places them into a broader framework of social political and intellectual history.

Radiology in Medical Practice-A. B. M. Abdullah 2015-12-10 An excellent guide in radiology, helpful not only for medical students of different specialities, but also for the radiologists, general practitioners and even medical teachers. . The book is divided into two sections. Section I deals with X-rays and is subdivided to various body systems including respiratory systems, CVS, abdomen, skeletal system and bones, etc. Section II contains CT scans and MRI involving chest, brain and abdomen. . The text has been divided into three parts: (i) Presentation of the film; (ii) Diagnosis and differential diagnoses; and (iii) finally, important related questions and answers with relevant short notes are discussed. . This book also contains useful tips, suggestions and reminders for the examination. . The approach has been easily understandable, concise and does not overburden the clinicians, busy practitioners, consultants and even specialists in the midst of volumes around them. . This book is an excellent guide in radiology, helpful not only for medical students of different specialities, but also for the radiologists, general practitioners and even medical teachers.

250 Cases in Clinical Medicine-Eirini Kasfiki 2019-05-31 Medical curricula change continually to reflect the evolving roles of doctors, changes in treatments and advances in technology. Medicine moves at pace and it takes a practitioner committed to continuing professional development to keep up. This new edition of 250 Cases in Clinical Medicine has been thoroughly updated to reflect the changing form of the Royal College of Physicians' curriculum. Some chapters from the previous edition have been dropped to allow new, more clinically relevant topics to be included. Chapters of symptom-based cases have also been added, as well as a section on acute medical problems and their management. Essential reading for MBBS, PLAB, MRCP (UK), MRCPI, MD (New Zealand, Malaysia, Singapore, India, Pakistan, Sri Lanka and Bangladesh), FRACP, FCCP and postgraduate medical examinations in the USA including USMLE and ABIM. New author team Cases alphabetised by system Procedures for the core medical curriculum added Symptoms-based cases added Emergency presentations added Self-assessment by system added Accompanying e-book on StudentConsult Now in full colour

The State of the Nation-Derek Curtis Bok 1998 The author shows that although Americans are better off today in most areas than they were in 1960, they have performed poorly compared with other leading industrial nations.

Digital Solidarity-Felix Stalder 2013-12-13 Felix Stalder's extended essay, Digital Solidarity, responds to the wave of new forms of networked organisation emerging from and colliding with the global economic crisis of 2008. Across the globe, voluntary association, participatory decision-making and the sharing of resources, all widely adopted online, are being translated into new forms of social space. This movement operates in the breach between accelerating technical innovation, on the one hand, and the crises of institutions which organise, or increasingly restrain society on the other. Through an inventory of social forms – commons, assemblies, swarms and weak networks – the essay outlines how far we have already left McLuhan's 'Gutenberg Galaxy' behind. In his cautiously optimistic account, Stalder reminds us that the struggles over where we will arrive are only just beginning.

Applied Stochastic Processes-G. Adomian 2014-05-09 Applied Stochastic Processes is a collection of papers dealing with stochastic processes, stochastic equations, and their applications in many fields of science. One paper discusses stochastic systems involving randomness in the system itself that can be a large dynamical multi-input, multi-output system. Examples of a large system are the national economy of a major country or when an acoustic wave is propagating as in the atmosphere, ocean, or sea. Another paper proves that only the average properties of the molecules of biology can be measured with precision in the test tube; and disputes a "simplistic" model of the cell as defined by a miniature Laplaces' universe. The paper notes that the way existing cells are constructed implies that quantum mechanical principles lead to certain questions (about simple experiments) having only statistical answers. Another paper addresses the detection of distributed, fluctuating targets in a reverberation limited, randomly time, and space varying transmission media. This approach is done by using the concepts of "random Green's functions" and the "stochastic Green's function." The collection will prove useful for cellular researchers, mathematicians, physicist, engineers, and academicians in the field of applied mathematics, statistics, and chemistry.

Higher Education in America-Derek Bok 2015-03-22 A sweeping assessment of the state of higher education today from former Harvard president Derek Bok Higher Education in America is a landmark work--a comprehensive and authoritative analysis of the current condition of our colleges and universities from former Harvard president Derek Bok, one of the nation's most respected education experts. Sweepingly ambitious in scope, this is a deeply informed and balanced assessment of the many strengths as well as the weaknesses of American higher education today. At a time when colleges and universities have never been more important to the lives and opportunities of students or to the progress and prosperity of the nation, Bok provides a thorough examination of the entire system, public and private, from community colleges and small liberal arts colleges to great universities with their research programs and their medical, law, and business schools. Drawing on the most reliable studies and data, he determines which criticisms of higher education are unfounded or exaggerated, which are issues of genuine concern, and what can be done to improve matters. Some of the subjects considered are long-standing, such as debates over the undergraduate curriculum and concerns over rising college costs. Others are more recent, such as the rise of for-profit institutions and massive open online courses (MOOCs). Additional topics include the quality of undergraduate education, the stagnating levels of college graduation, the problems of university governance, the strengths and weaknesses of graduate and professional education, the environment for research, and the benefits and drawbacks of the pervasive competition among American colleges and universities. Offering a rare survey and evaluation of American higher education as a whole, this book provides a solid basis for a fresh public discussion about what the system is doing right, what it needs to do better, and how the next quarter century could be made a period of progress rather than decline.

The Hidden Wealth of Nations-David Halpern 2013-04-25 Richer nations are happier, yet economic growth doesn't increase happiness. This paradox is explained by the Hidden Wealth of Nations - the extent to which citizens get along with other independently drives both economic growth and well-being. Much of this hidden wealth is expressed in everyday ways, such as our common values, the way we look after our children and elderly, or whether we trust and help strangers. It is a hidden dimension of inequality, and helps to explain why governments have found it so hard to reduce gaps in society. There are also deep cracks in this hidden wealth, in the form of our rising fears of crime, immigration and terror. Using a rich variety of international comparisons and new analysis, the book explores what is happening in contemporary societies from value change to the changing role of governments, and offers suggestions about what

policymakers and citizens can do about it.

Text & Presentation, 2015-Graley Herren 2016-01-26 Bringing together some of the best work from the 2015 Comparative Drama Conference in Baltimore, this book covers subjects from ancient Greece to 21st century America with a variety of approaches and formats, including two transcripts, 10 research papers and six book reviews. This year's highlight is the keynote conversation featuring Pulitzer Prize-winning playwright David Lindsay-Abaire. This volume is the twelfth in a series dedicated to presenting the latest research in the fields of comparative drama, performance and dramatic textual analysis.

Dynamical Systems Method for Solving Nonlinear Operator Equations-Alexander G. Ramm 2006-09-25 Dynamical Systems Method for Solving Nonlinear Operator Equations is of interest to graduate students in functional analysis, numerical analysis, and ill-posed and inverse problems especially. The book presents a general method for solving operator equations, especially nonlinear and ill-posed. It requires a fairly modest background and is essentially self-contained. All the results are proved in the book, and some of the background material is also included. The results presented are mostly obtained by the author. Contains a systematic development of a novel general method, the dynamical systems method, DSM for solving operator equations, especially nonlinear and ill-posed Self-contained, suitable for wide audience Can be used for various courses for graduate students and partly for undergraduates (especially for RUE classes)

Stream Ciphers and Number Theory-Thomas W. Cusick 1998 Hardbound. This book is almost entirely concerned with stream ciphers, concentrating on a particular mathematical model for such ciphers which are called additive natural stream ciphers. These ciphers use a natural sequence generator to produce a periodic keystream. Full definitions of these concepts are given in Chapter 2.This book focuses on keystream sequences which can be analysed using number theory. It turns out that a great deal of information can be deducted about the cryptographic properties of many classes of sequences by applying the terminology and theorems of number theory. These connections can be explicitly made by describing three kinds of bridges between stream ciphering problems and number theory problems. A detailed summary of these ideas is given in the introductory Chapter 1.Many results in the book are new, and over seventy percent of these results described in this book are based on recent research

Bosquejos de Sermones de Toda la Biblia-Heriberto Guerrero 2003-04 468 sermon outlines, compiled from the nine volumes of the Bible teaching series, The Bible, Book by Book. They cover all the books of the Bible and many different themes.

Mommy, Sissy, Baby, and Me-Jim Ciscell 2005-02-01 Mommy, Sissy, Baby, and Me was written weekly over four years as part of one man's evolution from a divorced bachelor to a grounded family man. It is the human story of a family learning to laugh in the face of adversity, as well as let love guide them through good and bad times. The often hilarious vignettes of modern day life can be read as an entire novel or browsed through in extended bathroom reading. The Stonecutter's Key author, Jim Ciscell, takes you through everyday life with a smile. Jim Ciscell lives in Starkville, Mississippi, with his wife and two daughters.

The Cape Town Convention-Mark J. Sundahl 2013-09-09 This book explains the application of the Convention on International Interests in Mobile Equipment to space assets, The Cape Town Convention, in a manner that is useful to lawyers engaged in satellite finance and to academics who desire to understand this treaty.
