The Spastic Forms of Cerebral Palsy-Adriano Ferrari 2009-12-29 by A. Berthoz The publication of this volume, edited by Adriano Ferrari and Giovanni Cioni, is a major event for several reasons. Most importantly, it concerns an area of child pathology that has yet to be fully explored. In this context, the authors' efforts to compile their observations as well as those of other clinicians and to elaborate their theories have resulted in an essential step in the field of cerebral palsy (CP). The originality of the book is its very clear focus, while at the same time the authors have encouraged the book's contributors to express their ideas and personal opinions. This leads sometimes to redundancy, but this is precisely one of the benefits of the book - cause the same problems are then exposed from different points of views. The reader is thus spared the normative attempts of many other pathology books, in which the complexity of a given disease is hidden by the authors' or editors' desire to impose a rigid taxonomy or epidemiology.

The First Modern Museums of Art-Carole Paul 2012-11-16 In the eighteenth and early nineteenth centuries the first modern, public museums of art—civic, state, or national—appeared throughout Europe, setting a standard for the nature of such institutions that has made its influence felt to the present day.

Although the emergence of these museums was an international development, their shared history has not been systematically explored until now. Taking up that project, this volume includes chapters on fifteen of the earliest and still major examples, from the Capitoline Museum in Rome, opened in 1734, to the Alte Pinakothek in Munich, opened in 1836. These essays consider a number of issues, such as the nature, display, and growth of the museums' collections and the role of the institutions in educating the public. The introductory chapters by art historian Carole Paul, the volume's editor, lay out the relationship among the various museums and discuss their evolution from private noble and royal collections to public institutions. In concert, the accounts of the individual museums give a comprehensive overview, providing a basis for understanding how the collective emergence of public art museums is indicative of the cultural, social, and political shifts that mark the transformation from the early-modern to the modern world. The fourteen distinguished contributors to the book include Robert G. W. Anderson, former director of the British Museum in London; Paula Findlen, Ubaldo Pierotti Professor of Italian History at Stanford University; Thomas Gaetgens, director of the Getty Research Institute; and Andrew McClellan, dean of academic affairs and professor of art history at Tufts University. Gibson Mastertone-Jim Mills 2009-05-01 (Reference). While Gibson produced literally thousands of banjos prior to WWII, only a handful were made in the now most desirable configuration: the Original Flathead Five-String Mastertone. Since Earl Scruggs helped to make them the most sought-after banjos in the world over 60 years ago, these instruments have amassed a cult-like following. These particular banjos featured a completely innovative design when the Gibson Company introduced them around 1930. They have since become the benchmark in design, sound quality, and just sheer power among banjo players. They have therefore also become the inspiration for nearly every successful 5-string banjo that has been manufactured for the past five decades. Like Martin Dreadnaught and Fender Stratocaster guitars, the Gibson Mastertone Banjo has achieved an exalted status: It is appreciated far beyond its utilitarian purpose as a musical instrument, and considered a truly original American art form. The Mastertone design and style are instantly recognizable by musicians and music lovers around the world, even if imitated by other manufacturers. Of the 130 or so Original Flathead Five-String Mastertones known to exist, 19 of the absolute best are featured here. The Scruggs, Reno, Jenkins, Crowe, Osborne, Huber and Mills banjos are shown in all of their glory, with details of their known histories and provenances, as well as never-before-seen photos, bills of sale, factory shipping ledgers, and other ephemera relating to these rare and highly desirable instruments.

Guide to Reprints-Anonimo 2005-10 The established reference work Guide to Reprints has been radically reworked for this edition. Bibliographical data was substantially increased where information was obtainable. In addition, the user-friendliness of Guide to Reprints was raised to the high level of other K.G. Saur

La Cultura-Ruggiero Bonghi 1903

Born to Crime-Mary Gibson 2002 Despite the popular perception that genetic explanations of the causes of crime are new, biological determinism is an idea that dates back to the birth of criminology. This is largely due to the efforts of Cesare Lombroso, widely regarded as the father of modern criminology. His 1876 work, Criminal Man, drew on Darwin to propose that most lawbreakers were throwbacks to a more primitive level of human evolution--identifiable by their physical traits, such as small heads, flat noses, large ears, and the like. These "born criminals" could not escape their biological destiny. The "scientific" appeal of these theories of what Lombroso called criminal anthropology had a powerful and long-lasting influence in contemporary Italy, Europe, and the Western world as a whole, and even today the stereotypes they created resonate in popular culture. Lombroso's influential ideas are explored in this provocative new book.
