Art and Economics in the City-Caterina Benincasa 2019-06-30 Emerging forms of alternative economic frameworks are changing the structure of society, redefining the relationship between centre and periphery, and the social dynamics in the urban fabric. In this context, the arts can play a crucial role in formulating a concept of complex and plural citizenship: This economic, social and cultural paradigm has the potential to overcome the conventional isolation of the arts and culture in ivory towers, and thereby to gradually make the urban fabric more fertile. This volume faces such sensitive issues by collating contributions from various disciplines: Economists, sociologists, urbanists, architects and creative artists offer a broad and deep assessment of urban dynamics and their visions for the years to come.

Ülkemizde hayata geçen denetim düzenleme ve uygulamalarının çok yeni olması nedeniyle ülkemizde bağımsız denetçi insan kaynağı ağırlıklı olarak muhasebe uygulayıcılarından geçişlere karşlanmıştır. Bu nedenle, muhasebe standartlarının yayınlanması ile birlikte mesleğin içerisinde yapsal bir değişikliğe uğrayan uygulayıcılar için denetim ile birlikte kendilerini güncelleme, geliştirme ve bir nevi evrimleşme süreci de başlamsı bulunmaktadır. Uygulayıcı için artık muhasebe sadece mali raporlamadan, denetçi için de sadece vergi denetiminden ibaret değildir. Skepticism and Political Thought in the Seventeenth and Eighteenth Centuries-John Christian Laursen 2015-02-26 In this collection, thirteen distinguished contributors examine the influence of the ancient skeptical philosophy of Pyrrho of Elis and Sextus Empiricus on early modern political thought. Classical skepticism argues that in the absence of certainty one must either suspend judgment and live by habit or act on the basis of probability rather than certainty. In either case, one must reject dogmatic confidence in politics and philosophy. Surveying the use of skepticism in works by Hobbes, Descartes, Hume, Smith, and Kant, among others, the essays in Skepticism and Political Thought in the Seventeenth and Eighteenth Centuries demonstrate the pervasive impact of skepticism on the intellectual landscape of early modern Europe. This volume is not just an authoritative account of skepticism's importance from the Enlightenment to the French Revolution, it is also the basis for understanding skepticism's continuing political implications.

Accounting-R. F. Meigs 1990-02

Grapes of silence-F. Ribemont 1999

The U. S. Air Service in World War I-Maurer Maurer 2016-09-28 When the Great War began in Europe in August 1914, aviation in the U.S. Army was a function of the Signal Corps. Its mission was to support infantry and artillery by providing observation services. There were people in the Army and outside who could foresee no other military use for aircraft. Others believed that the airplane should be given a combat role. Some thought that aviation should be a separate combat arm. As news of aerial operations in the European war drifted across the Atlantic, there was more and more talk of buying fighting planes, battle planes, and bomb-dropping planes for the U.S. Army. Although some faltering steps were taken, little progress was made toward building a fighting air force—or even toward developing observation services for the ground forces-before the United States entered the war in April 1917. Having joined Great Britain, France, and Italy in war against Germany and Austria, the United States quickly drew plans for an air service to include fighting and bombing airplanes as well as observation planes and balloons. The allies, who had been fighting for two years or more and were much farther advanced in military aviation, provided valuable information to help the United States build up its air service. Allied contributions included not only technical data on new developments in aircraft and other aeronautical equipment but also information on how to use aviation in battle. One thing borrowed from the allies was the classification of military aviation into three, broad, functional areas labeled "observation," "pursuit," and "bombardment." Another was the concept that aviation had two separate roles, one "tactical," the other "strategical." In addition, the Allies provided ideas, along with detailed information about tactics, techniques, and procedures, that formed the foundation for the employment of the Air Service, American Expeditionary Forces (AEF), in World War I. The wartime operations of the Air Service, AEF, included visual and photographic reconnaissance, artillery adjustment, infantry liaison, counterair operations, bombing and strafing in close support of ground forces, and interdiction of the enemy's lines of communications. The war ended before US. units were ready for strategic air operations, but thinking on strategic air warfare had advanced far enough to raise, and tentatively answer, questions concerning area versus precision bombing and day versus night operations. Thus, US. military aviation in November 1918 was far different from what it had been when the war began four years earlier.
