Lab Experiments in Introductory Chemistry-Phil Reedy 2003-03-21 The manual contains laboratory experiments written specifically for the prep-chem lab, as well as for the general chemistry course. Available as a complete manual or custom published at <http://custompub.whfreeman.com>.

Introduction to Medical Laboratory Technology-F. J. Baker 2014-06-28 Introduction to Medical Laboratory Technology presents the development in the medical laboratory science. It discusses the general laboratory glassware and apparatus. It addresses a more specialized procedure in mechanization, automation, and data processing. Some of the topics covered in the book are the composition of glass; cleaning of glassware; the technique of using volumetric pipettes; technique for centrifugation; the production of chemically pure water; principal foci of a converging lens; micrometry; magnification; setting up the microscope; and fluorescence microscopy. The precautions against infection are covered. The storage of chemicals and treatment of accidents are discussed. The text describes the collection and reporting of specimens. A study of the fundamentals of chemistry and endocrine systems is presented. A chapter is devoted to the elementary colorimetry and spectro-photometry. Another section focuses on the introduction to clinical chemistry and blood gas analysis. The book can provide useful information to scientists, physicists, doctors, students, and researchers.

Introductory Titrimetric and Gravimetric Analysis-Evelyn M. Rattenbury 2016-06-06 Introductory Titrimetric and Gravimetric Analysis discusses the different types of titration and the weighing of different solutions in solid form. Coverage is made on acid- base titration, argentometric titrations, and oxidation- reduction titrations. Iodometric titrations and complexometric titrations are also explained. Extensive discussion on each of the titration method, along with some examples and laboratory experiments, is given. The process of weight measurement of damp powder is one example of the experiments. The book is a manual that guides a student to the correct ways of conducting an experiment made on such solutions as sodium hydroxide using hydrochloric acid and oxalic acid. Outcome of such experiments in terms of composition, weight of solutions, and measurement of pressure in certain environment is tabulated and briefly explained. Logarithms and antilogarithms are included at the end of the book. The text will serve as a good laboratory manual for students preparing for science examination as well as for chemists and chemical engineers.

Standard Methods of Clinical Chemistry-David Seligson 2013-10-22 Standard Methods of Clinical Chemistry, Volume II describes accurate and workable methods used in clinical laboratories. This 21-chapter text covers the principles, reagents, procedure, and calculation of these methods. The opening chapters explore various clinical chemistry methods for determination of serum calcium, cholesterol, chloride, fatty acids, gamma globulin, and hemoglobin. The succeeding chapters review the methods for detection of free and conjugated 17-hydroxycorticosteroids, 17-ketosteroids, serum iron, lipase, nitrogen by Kjeldahl method, and nonprotein nitrogen. The remaining chapters deal with other clinical methods for blood pH, enzyme, phosphatides, urine porphyrins, protein-bound ion, and sulfobromophthalein determination. This book is directed primarily toward clinical chemists, but pathologists, medical technicians, clinical investigators, chemists in other fields, and students will find this book rewarding.
