Hayes 2004-08-31 This volume examines the role of mindfulness principles and practices in a range of well-established cognitive and behavioral treatment approaches. Coverage includes acceptance and commitment therapy, dialectical behavior therapy, mindfulness-based cognitive therapy, integrative behavioral couple therapy, behavioral activation, and functional analytic psychotherapy. Contributors describe their clinical methods and goals, articulate their theoretical models, and examine similarities to and differences from other approaches.

Fixed Illumination for Pedestrian Protection; Users' Manual-Mark Freedman 1975 This document reports the findings and applications of research investigating the effectiveness of specially designed low pressure sodium luminaires to increase pedestrian safety at intersection crosswalks at night. It was found that the LPS systems had beneficial effects on the crossing environment, driver performance, and pedestrian behavior. Illumination intensity was increased as much as thirty-fold, resulting in an average of 9% increase of available time for drivers to respond.

User's Manual and Examples for GNWave-Zeki Demirbilek 1992 This report describes the operation and use of a new numerical model, GNWave. This model was designed to simulate the evolution of a train of two-dimensional waves in waters of arbitrary bottom topography, varying from shallow water to waters of moderate depth. The program uses the Green-Naghdi theory of fluid sheets as its model, and integrates a set of coupled, nonlinear partial differential equations in time to perform the simulation of surface gravity waves. Report 1 in this series, entitled 'Application of the Green-Naghdi theory of fluid sheets to shallow water wave problems', contains a detailed description of the mathematical basis of GNWave model. The model GNWave has been shown to reproduce with engineering accuracy the evolution of a wave of permanent form, from small amplitudes up to almost breaking conditions. The numerical model is portable with little or no changes to a wide variety of platforms, and has successfully been tested on high-end PC's and VAX and CRAY mainframe systems. The governing equations were programmed using Fortran as the language. The program consists of a main program and a number of modules to perform the calculations. A functional flow chart of individual routines involved in the computation is included herein. The main routine directs the sequence of the calculation, including the reading of the input and integration of the equations, and performs some post-processing. Algorithms, Amphibious/landing operations, Coastal processes, Computer models, Input/output, Logistics-Over-the-Shore (LOTS), Numerical simulation, Wave models.
