King Solomon's Ring-Konrad Lorenz 2003-08-27 Solomon, the legend goes, had a magic ring which enabled him to speak to the animals in their own language. Konrad Lorenz was gifted with a similar power of understanding the animal world. He was that rare beast, a brilliant scientist who could write (and indeed draw) beautifully. He did more than any other person to establish and popularize the study of how animals behave, receiving a Nobel Prize for his work. King Solomon's Ring, the book which brought him worldwide recognition, is a delightful treasury of observations and insights into the lives of all sorts of creatures, from jackdaws and water-shrews to dogs, cats and even wolves. Charmingly illustrated by Lorenz himself, this book is a wonderfully written introduction to the world of our furred and feathered friends, a world which often provides an uncanny resemblance to our own. A must for any animal-lover!

Patterns of Behavior-Richard W. Burkhardt 2005 Ethology, the study of animal behaviour, has emerged as a serious discipline only within the past century. This volume recounts the development of scientific interest in animals when they are alive, rather than dead on the dissecting table.

The Foundations of Ethology-K. Lorenz 2013-04-17 This book is a contribution to the history of ethology-not a definitive history, but the personal view of a major figure in that story. It is all the more welcome because such a grand theme as ethology calls for a range of perspectives. One reason is the overarching scope of the subject. Two great questions about life that constitute much of biology are "How does it work (structure and function)?" and "How did it get that way (evolution and ontogeny)?" Ethology addresses the antecedent of "it." Of what are we trying to explain the mechanism and development? Surely behavior, in all its wealth of detail, variation, causation, and control, is the main achievement of animal evolution, the essential consequence of animal structure and function, the *raison d'être* of all the rest. Ethology thus spans between and overlaps with the ever-widening circles of ecology over the eons and the ever-narrowing focus of physiology of the neurons. Another reason why the history of ethology needs perspectives is the recency of its acceptance. For such an obviously major aspect of animal biology, it is curious how short a time-less than three decades-has seen the excitement of an active field and a substantial fraternity of workers, the addition of professors and courses to departments and curricula in biology (still far from universal), and the normal complement of special journals, symposia, and sessions at congresses.

Studies in Animal and Human Behaviour-Konrad Lorenz 1970

Man Meets Dog-Konrad Lorenz 2003-09-02 In this wonderful book, the famous scientist and best-selling author, Konrad Lorenz, 'the man who talked with animals', enlightens and entertains us with his illustrated account of the unique relationship between humans and their pets. Displaying Lorenz's customary humanity and expert knowledge of animals, Man Meets Dog is also a deeply personal and entertaining account of his relationships with his own four-legged friends. With charming sketches on almost every page, Man Meets Dog offers a delightful insight into animal and human thinking and feeling. An essential

companion for all lovers of dogs (and cats!).

Civilized Man's Eight Deadly Sins-Konrad Lorenz 1974 Essays on destructive influences of the modern environment on human behavior.

Extinction-Ashley Dawson 2016-08-01 Some thousands of years ago, the world was home to an immense variety of large mammals. From woolly mammoths and saber-toothed tigers to giant ground sloths and armadillos the size of automobiles, these spectacular creatures roamed freely. Then human beings arrived. Devouring their way down the food chain as they spread across the planet, they began a process of voracious extinction that has continued to the present. Headlines today are made by the existential threat confronting remaining large animals such as rhinos and pandas. But the devastation summoned by humans extends to humbler realms of creatures including beetles, bats and butterflies. Researchers generally agree that the current extinction rate is nothing short of catastrophic. Currently the earth is losing about a hundred species every day. This relentless extinction, Ashley Dawson contends in a primer that combines vast scope with elegant precision, is the product of a global attack on the commons, the great trove of air, water, plants and creatures, as well as collectively created cultural forms such as language, that have been regarded traditionally as the inheritance of humanity as a whole. This attack has its genesis in the need for capital to expand relentlessly into all spheres of life. Extinction, Dawson argues, cannot be understood in isolation from a critique of our economic system. To achieve this we need to transgress the boundaries between science, environmentalism and radical politics. Extinction: A Radical History performs this task with both brio and brilliance.

The Origins and Development of African Livestock-Roger Blench 2006-01-27 This book presents an interdisciplinary overview of the origins of African livestock, placing Africa as one of the world centres for animal domestication. With sections on archaeology, genetics, linguistics and ethnography, this collection contains over twenty contributions from the field's foremost experts and provides fully illustrated, never before published data, and extensive bibliographies.

Calls Beyond Our Hearing-Holly Menino 2012-04-10 A worldwide journey through the mystery and science of animal communication. Calls Beyond Our Hearing is a fascinating exploration of animals, their voices, and their survival. Traveling from Panama to England, Africa to Puerto Rico, Quebec to America, Holly Menino learns from scientists, explorers, and cutting-edge studies about a wide variety of animal species as they feed, play, fight, mate, and communicate for survival. Voice by voice, researchers assemble the building blocks of animal communication, such as: --How tungara frogs distinguish one mate from thousands of suitors --The purposeful song duets of rare birds in a remote island wilderness --England's iconic red deer and the interloper that is diluting the species --How meerkats gather, warn or help each other, and reject outsiders with vocalizations --The communication of elephants in close groups and across great distances Calls Beyond Our Hearing will engage anyone interested in the musical world of creatures, and what animal communication can teach us about our own voices and songs.

Plants, Man and Life-Edgar Anderson 1967 "Once in a great while a popular scientific book opens a whole new field. Plants, Man and Life is such a book."—The New York Times What's the difference between wild and cultivated plants? Why has the study of cultivated plants been neglected, and why is so little known about the common plants that have endured since ancient times? This innovative ecological survey examines the long history of human and plant interactions. Author Edgar Anderson, a distinguished botanist, analyzes suggestive pieces of evidence in a reader-friendly narrative that recounts the origins and evolution of plant life with all the intrigue of a good detective story. In tracing the development of human influence on plant life, Anderson focuses particularly on crops, which he reveals as having started out as weeds—hybrids that sprang up from the dump heaps and gardens of early humans. His investigation of the tangled and continuing history of weeds and cultivated plants ranges from autumnal European greens and the American sunflower to backyard landscapes in developing countries, where fruit trees, flowers, vines, and vegetables mingle with the sources for fibers, poisons, narcotics, and other drugs.

Essential Animal Behavior-Graham Scott 2009-02-05 Essential Animal Behavior provides a comprehensive introduction to all areas of the subject: from the genetic and neurobiological control of behavior to the learning, development, and function of behavior in an evolutionary context. Social behaviour is also covered throughout the text. Written in a concise and engaging style, this new book: includes examples from both marine and terrestrial environments around the world places current research alongside classic examples, and puts the study of animal behavior in an applied context, emphasizing the implications for animal welfare

and animal conservation. Carefully designed to meet the needs of students coming to the subject for the first time, the book includes the following features: key concept boxes Focus on boxes chapter summaries guided reading to aid revision and further study case studies and boxed examples that reinforce essential points, and questions for discussion. This book is essential reading for degree-level students following modular programs in biology, zoology, marine biology, and psychology. An Instructor manual CD-ROM for this title is available. The Long Life of Magical Objects-Allegra Iafate 2019-07-22 This book explores a series of powerful artifacts associated with King Solomon via legendary or extracanonical textual sources. Tracing their cultural resonance throughout history, art historian Allegra Iafate delivers exciting insights into these objects and interrogates the ways in which magic manifests itself at a material level. Each chapter focuses on a different Solomonic object: a ring used to control demons; a mysterious set of bottles that constrain evil forces; an endless knot or seal with similar properties; the shamir, known for its supernatural ability to cut through stone; and a flying carpet that can bring the sitter anywhere he desires. Taken together, these chapters constitute a study on the reception of the figure of Solomon, but they are also cultural biographies of these magical objects and their inherent aesthetic, morphological, and technical qualities. Thought-provoking and engaging, Iafate's study shows how ancient magic artifacts live on in our imagination, in items such as Sauron's ring of power, Aladdin's lamp, and the magic carpet. It will appeal to historians of art, religion, folklore, and literature.

King Solomon and His Magic Ring-Elie Wiesel 1999-08-26 Recounts some of the stories of the wisdom and folly in the life of the legendary King Solomon.

Curious Naturalists-Dr. Niko Tinbergen 2017-01-12 Dr. Niko Tinbergen was well known as a naturalist and a student of animal behaviour in England, on the Continent and in the United States. Ever since he was a young student in Holland he had been curious about nature, and in this book he sets out some of the facts that 25 years of curiosity gave him. As a biologist, anything living was his province—the bee-killing wasps and the digger wasps of the Dutch sand dunes; the Snow Buntings and Phalaropes of Greenland; Hobbies and other hawks; moths and butterflies in various parts of England and Holland; Black-headed Gulls of the Ravenglass nature reserve, Cumberland, the Kittiwakes and Eider Ducks of the Farne Islands off the coast of Northumberland. Readers cannot fail to be struck—and possibly sometimes amused—by the patience and ingenuity shown in the field studies undertaken by Dr. Tinbergen and his fellow naturalists—and which are now passed on for the benefit and interest of his readers. The studies were always undertaken seriously, but this did not prevent Dr. Tinbergen from writing about them in the liveliest way; he realised that quite often he and his friends must have seemed to onlookers to be very curious naturalists indeed.

Are We Smart Enough to Know How Smart Animals Are?-Frans de Waal 2016-04-25 A New York Times bestseller: "A passionate and convincing case for the sophistication of nonhuman minds." —Alison Gopnik, *The Atlantic* Hailed as a classic, *Are We Smart Enough to Know How Smart Animals Are?* explores the oddities and complexities of animal cognition—in crows, dolphins, parrots, sheep, wasps, bats, chimpanzees, and bonobos—to reveal how smart animals really are, and how we've underestimated their abilities for too long. Did you know that octopuses use coconut shells as tools, that elephants classify humans by gender and language, and that there is a young male chimpanzee at Kyoto University whose flash memory puts that of humans to shame? Fascinating, entertaining, and deeply informed, de Waal's landmark work will convince you to rethink everything you thought you knew about animal—and human—intelligence.

The Natural Science of the Human Species-Konrad Lorenz 1997 This translation contains a synopsis of all the ideas that made Lorenz famous as the founder of ethology, the study of comparative animal behavior. edited from the author's posthumous works by Agnes von Cranach Here Am I Where Are You?: The Behavior of the Greylag Goose was thought to be Konrad Lorenz's last book. However, in 1991 the Russian Manuscript was discovered in an attic, and its subsequent publication in German has become a scientific sensation. Written under the most extreme conditions in Soviet prison camps, the Russian Manuscript was the first outline of a large-scale work on behavioral science. This translation contains a synopsis of all the ideas that made Lorenz famous as the founder of ethology, the study of comparative animal behavior.

Bird Love-Wenfei Tong 2020-03-24 A stunningly illustrated look at the mating and parenting lives of the world's birds Bird Love looks at the extraordinary range of mating systems in the avian world, exploring all the stages from courtship and nest-building to protecting eggs and raising chicks. It delves into the reasons why some species, such as the wattled jacana, rely on males to do all the childcare, while others, such as cuckoos and honeyguides, dump their eggs in the

nests of others to raise. For some birds, reciprocal promiscuity pays off: both male and female dunnocks will rear the most chicks by mating with as many partners as possible. For others, long-term monogamy is the only way to ensure their offspring survive. The book explores the wide variety of ways birds make sure they find a mate in the first place, including how many male birds employ elaborate tactics to show how sexy they are. Gathering in leks to display to females, they dance, pose, or parade to sell their suitability as a mate. Other birds attract a partner with their building skills: female bowerbirds rate brains above beauty, so males construct elaborate bowers with twig avenues and cleared courtyards to impress them. Looking at the differing levels of parenting skills across species around the world, we see why a tenth of bird species, including the fairy-wrens of Australia, have helpers at the nest who forgo their own reproduction to assist the breeding pair; how brood parasites and their hosts have engaged in evolutionary arms races; and how monogamous pairs share—or relinquish—their responsibilities. Illustrated throughout with beautiful photographs, *Bird Love* is a celebration of the global diversity of avian reproductive strategies.

In the Spirit of Hegel—Robert C. Solomon 1985-10-31 The Phenomenology of Spirit was Hegel's grandest experiment, changing our vision of the world and the very nature of philosophical enterprise. In this book, Solomon captures the bold and exhilarating spirit, presenting the Phenomenology as a thoroughly personal as well as philosophical work. He begins with a historical introduction, which lays the groundwork for a section-by-section analysis of the Phenomenology. Both the initiated and readers unacquainted with the intricacies of German idealism will find this to be an accessible and exciting introduction to this great philosopher's monumental work.

The Basic Writings of Bertrand Russell—Bertrand Russell 2009-03-04 Featuring seminal work in the philosophies of mathematics and language, this comprehensive and assiduously edited collection also makes available his provocative and controversial views on religion and international relations.

Solomon—Steven Weitzman 2011-01-01 Looks at the life and legacy of King Solomon, describing his temple, the nature of his wisdom, and his biblical writings. Evolution and Modification of Behavior—Konrad Lorenz 1973

Animal Behavior Desk Reference—Edward M. Barrows 2011-04-26 "Words are our tools, and, as a minimum, we should use clean tools. We should know what we mean and what we do not, and we must forearm ourselves against the traps that language sets us." -- The Need for Precise Terminology, Austin (1957, 7-8) It follows that, for effective and efficient communication, people should have, or at least understand, the same precise terminology. Such terminology is crucial for the advancement of basic, theoretical, and applied science, yet too often there is ambiguity between scientific and common definitions and even discrepancies in the scientific literature. Providing a common ground and platform for precise scientific communication in animal behavior, ecology, evolution, and related branches of biology, Animal Behavior Desk Reference, A Dictionary of Behavior, Ecology, and Evolution, Third Edition contains more than 800 new terms and definitions, 48 new figures, and thousands of additions and improvements. Using a dictionary format to present definitions in a standard, easily accessible manner, the book's main body emphasizes conceptual terms, rather than anatomical parts or taxonomic terms, and focuses on nouns, rather than verbs or adjectives. Term hierarchies are handled with bulleted entries and terms with multiple definitions are included as superscripted entries. All sources are cited and most are paraphrased to conform to uniform style and length. The dictionary also includes nontechnical and obsolete terms, synonyms, pronunciations, and notes and comments, as well as etymologies, term originators, and related facts. Appendices address organism names, organizations, and databases. Devoted to the precise and correct use of scientific language, this third edition of a bestselling standard enables students and scientists alike to communicate their findings and promote the efficient advancement of science.

The Backyard Birdsong Guide Eastern and Central North America—Donald Kroodsma 2016-04-12 Back by popular demand with more than 300,000 copies sold, the Cornell Lab of Ornithology is proud to re-release the widely acclaimed and bestselling bird audio field guide series, Backyard Birdsongs, from award-winning Ornithologist and Author, Donald Kroodsma. Backyard Birdsongs is an interactive handbook of birds and their songs for beginning bird-watchers. With a touch-button electronic module housing common vocalizations of 75 species from across Eastern and Central North America, this volume offers a truly sensory way to identify and get to know local birds. Crisply detailed and scientifically accurate illustrations accompany each entry, and up-to-date range maps

provide clear geographical reference points. Complete with an introduction to birdsongs that will inspire readers to look out their kitchen windows and venture out in the field, this unique book provides an exciting entryway into the subtle art of birding. This second edition includes a much-requested new Sound Track Index (to help make watching and listening to birds easier), and a download of the award-winning MERLIN™ Bird ID App available FREE on iTunes and Android stores (no code necessary). 35% of the net proceeds from the sale of Backyard Birdsongs supports projects at the Cornell Lab, such as children's educational and community programs.

The Evolution of Animal Communication: Reliability and Deception in Signaling Systems-William A. Searcy 2010-01-01 Gull chicks beg for food from their parents. Peacocks spread their tails to attract potential mates. Meerkats alert family members of the approach of predators. But are these--and other animals--sometimes dishonest? That's what William Searcy and Stephen Nowicki ask in The Evolution of Animal Communication. They take on the fascinating yet perplexing question of the dependability of animal signaling systems. The book probes such phenomena as the begging of nesting birds, alarm calls in squirrels and primates, carotenoid coloration in fish and birds, the calls of frogs and toads, and weapon displays in crustaceans. Do these signals convey accurate information about the signaler, its future behavior, or its environment? Or do they mislead receivers in a way that benefits the signaler? For example, is the begging chick really hungry as its cries indicate or is it lobbying to get more food than its brothers and sisters? Searcy and Nowicki take on these and other questions by developing clear definitions of key issues, by reviewing the most relevant empirical data and game theory models available, and by asking how well theory matches data. They find that animal communication is largely reliable--but that this basic reliability also allows the clever deceiver to flourish. Well researched and clearly written, their book provides new insight into animal communication, behavior, and evolution.

The Philosopher's Dog-Raimond Gaita 2016-10-04 In this beautifully written book Raimond Gaita tells inspirational, poignant, sometimes funny but never sentimental stories of the dogs, cats and cockatoos that lived and died within his own family. He asks fascinating questions about animals: Is it wrong to attribute the concepts of love, devotion, loyalty, grief or friendship to them? Why do we care so much for some creatures but not for others? Why are we so concerned with proving that animals have minds? Reflecting on these questions, and drawing on the ideas of Descartes, Wittgenstein and J.M. Coetzee, Gaita pleads that we ask ourselves what it means to be creatures of 'flesh and blood.' He discusses mortality and sexuality, the relations between storytelling, philosophy and science and the spiritual love of mountains. An arresting and profound book, The Philosopher's Dog is a triumph of both storytelling and philosophy. This Routledge Classics edition includes a substantial new introduction and afterword by the author.

On Aggression-Konrad Lorenz 2002 Hugely controversial on publication, this is an insightful and characteristically entertaining survey of animal behaviour and the evolution of aggression throughout the animal world.

Necroculture-Charles Thorpe 2016-06-24 In this book, the author draws on Karl Marx's writings on alienation and Erich Fromm's conception of necrophilia in order to understand these aspects of contemporary culture as expressions of the domination of the living by the dead under capitalism. Necroculture is the ideological reflection and material manifestation of this basic feature of capitalism: the rule of dead capital over living labor. The author argues that necroculture represents the subsumption of the world by vampire capital.

Of Wolves and Men-Barry Lopez 2016-05-31 National Book Award Finalist: A "brilliant" study of the science and mythology of the wolf by the New York Times-bestselling author of Arctic Dreams (The Washington Post). When John Fowles reviewed Of Wolves and Men, he called it "A remarkable book, both biologically absorbing and humanly rich, and one that should be read by every concerned American." In this National Book Award-shortlisted work, literary master Barry Lopez guides us through the world of the wolf and our often-mistaken perceptions of another species' place on our shared planet. Throughout the centuries, the wolf has been a figure of fascination and mystery, and a major motif in literature and myth. Inspiring fear and respect, the creature has long exerted a powerful influence on the human imagination. Of Wolves and Men takes the reader into the world of the *Canis lupus* and its relationship to humankind through the ages. Lopez draws on science, history, mythology, and his own field research to present a compelling portrait of wolves both real and imagined, dispelling our fear of them while celebrating their place in our history, legends, and hearts. This ebook features an illustrated biography of Barry Lopez including rare images and never-before-seen documents from the author's personal collection.

Behind the Mirror-Konrad Lorenz 1978 Lorenz examines the nature of human thought and intelligence and attributes the problems of modern civilization

largely to the limitations.

Beast and Man-Mary Midgley 2004-03-01 Philosophers have traditionally concentrated on the qualities that make human beings different from other species. In *Beast and Man* Mary Midgley, one of our foremost intellectuals, stresses continuities. What makes people tick? Largely, she asserts, the same things as animals. She tells us humans are rather more like other animals than we previously allowed ourselves to believe, and reminds us just how primitive we are in comparison to the sophistication of many animals. A veritable classic for our age, *Beast and Man* has helped change the way we think about ourselves and the world in which we live.

On Aggression-Konrad Lorenz 2005-07-08 Konrad Lorenz was the author of some of the most popular books ever published about animals, including the best-selling *Man Meets Dog* and *King Solomon's Ring*. *On Aggression* is one of his finest works, as well as the most controversial. Through an insightful and characteristically entertaining survey of animal behaviour, the Nobel Prize winner tracks the evolution of aggression throughout the animal world. He also raises some startling questions when he applies his observations of animal psychology to humankind. His conclusions caused an unprecedented controversy, culminating in a statement adopted by UNESCO in 1989 which appeared to condemn his work. Whether or not Lorenz actually claimed aggression is hard-wired into the human psyche, and that war is an inevitable result, is something readers can decide upon for themselves. However you react, there can be no doubting that in today's violent world this powerful work remains of paramount importance.

How to Be a Good Creature-Sy Montgomery 2018-09-25 A New York Times bestseller! National Book Award finalist Sy Montgomery reflects on the personalities and quirks of 13 animals—her friends—who have profoundly affected her in this stunning, poetic, and life-affirming memoir featuring illustrations by Rebecca Green. Understanding someone who belongs to another species can be transformative. No one knows this better than author, naturalist, and adventurer Sy Montgomery. To research her books, Sy has traveled the world and encountered some of the planet's rarest and most beautiful animals. From tarantulas to tigers, Sy's life continually intersects with and is informed by the creatures she meets. This restorative memoir reflects on the personalities and quirks of thirteen animals—Sy's friends—and the truths revealed by their grace. It also explores vast themes: the otherness and sameness of people and animals; the various ways we learn to love and become empathetic; how we find our passion; how we create our families; coping with loss and despair; gratitude; forgiveness; and most of all, how to be a good creature in the world.

Tamed and Untamed-Sy Montgomery 2017-09-18 Extraordinary new insights into the minds and lives of our fellow creatures from two of the world's top animal authors, Elizabeth Marshall Thomas and Sy Montgomery. A *Mail on Sunday* "Critic's Pick" Best Read of the Year "In their writing and in their lives and in their remarkable friendship, Liz and Sy break down false barriers and carry us closer to our fellow creatures."—from the foreword by Vicki Constantine Croke, author of *Elephant Company* *Tamed and Untamed*—a collection of essays penned by two of the world's most celebrated animal writers, Sy Montgomery and Elizabeth Marshall Thomas—explores the minds, lives, and mysteries of animals as diverse as snails, house cats, hawks, sharks, dogs, lions, and even octopuses. Drawing on stories of animals both wild and domestic, the two authors, also best friends, created this book to put humans back into the animal world. The more we learn about what other animals think and do, they explain, the more we understand ourselves as animals, too. Writes Montgomery, "The list of attributes once thought to be unique to our species—from using tools to waging war—is not only rapidly shrinking, but starting to sound less and less impressive when we compare them with other animals' powers." With humor, empathy, and introspection, Montgomery and Thomas look into the lives of all kinds of creatures—from man's best friend to the great white shark—and examine the ways we connect with our fellow species. Both authors have devoted their lives to sharing the animal kingdom's magic with others, and their combined wisdom is an indispensable contribution to the field of animal literature. The book contains a foreword by Vicki Constantine Croke, author of the bestseller *Elephant Company*.
