1. Cours de Linguistique Générale (1907)-Ferdinand de Saussure 1996 Saussure's Cours de linguistique gnrale has been one of the seminal books of the twentieth century, having shaped modern linguistics and semiology, and having importantly affected anthropology, philosophy and literary studies. Yet the book was written by Saussure's colleagues, based on student notes taken during the three occasions when Saussure gave his lectures on general linguistics. For Saussure's first course, the notebooks of Albert Riedlinger are certainly the best and the most detailed. They have loomed large in our knowledge of Saussurean linguistics, but a number of Saussure's statements, as recorded by Riedlinger, have never been known to a larger public. Until now, those notes themselves have been unavailable, except in fragmented and incomplete form in Engler's unwieldy and hard-to-find edition of the Cours. Now, the best of the student notes to all three courses will be available for the first time as they were taken down in French, and have been provided with a facing translation, an introduction, and a full analytical index of terminology. With their publication, Saussurean scholars as well as students of linguistics and related disciplines will have at their disposal the most reliable source material for Saussure's thinking on language. It is hoped that this work will encourage those who take Saussure's principal ideas to be sufficiently known from the CLG to reconsider Saussure's ideas in their greater immediacy and in their development, so as to appreciate nuances of his thinking generally unknown until now. This edition presents Riedlinger's notes intact and in their original order. The notes are accompanied by an introduction and a full English translation of the text. Together with the other two volumes, it offers the best insight yet into the evolution of Saussure's thinking.

Human Rights and World Trade-Ana Gonzalez-Pelaez 2004-08-02 A new and incisive analysis of the political viability of human rights, with an in-depth investigation of its largest violation: world hunger. Gonzalez-Pelaez develops John Vincent's theory of basic human rights within the context of the international political economy and demonstrates how the right to food has become an international norm enshrined within international law. She then assesses the international normative and practical dimensions of hunger in connection with international trade and poverty. Using the society of states as the framework of analysis, she explores the potential that the current system has to correct its own anomalies, and examines the measures that can move the hunger agenda forward in order to break through its current stagnation.

Mathematical Physics-Sadri Hassani 2002-02-08 For physics students interested in the mathematics they use, and for math students interested in seeing how some of the ideas of their discipline find realization in an applied setting. The presentation strikes a balance between formalism and application, between abstract and concrete. The interconnections among the various topics are clarified both by the use of vector spaces as a central unifying theme, recurring throughout the book, and by putting ideas into their historical context. Enough of the essential formalism is included to make the presentation self-contained.

Feminism and the Politics of Travel After the Enlightenment-Yael Rachel Schlick 2012-01 Taking the Enlightenment and the feminist tradition to which it gave rise as its historical and philosophical coordinates, Feminism and the Politics of Travel After the Enlightenment explores the coincidence of feminist vindications and travel in the late eighteenth and nineteenth centuries, the way travel's utopian dimension and feminism's utopian ideals have intermittently fed off each other in productive ways. Travel's gender politics is analyzed in the works of J.-J. Rousseau, Mary Wollstonecraft, Stéphanie-Félicité de Genlis, Germaine de Staël, Frances Burney, Flora Tristan, Suzanne Voilquin, Gustave Flaubert George Sand, Robyn Davidson, and Sara Wheeler.

Dictionary of Civil Engineering-Jean-Paul Kurtz 2004-09-14 I am pleased to present a work which marks a milestone in the history of public works and, more precisely, in that of permanent structures—a comprehensive dictionary of Civil Engineering terms. Since the beginning of time, Man has always tried to find a means to clear the obstacles which nature erected to displace him. With the first tree trunk thrown across a river, man sought to improve the crossing structure. After the invention of the wheel, and to satisfy his thirst for conquest (Roman ways), and comfort (aqueducts), man built bridges that became a preremptory necessity to move quickly. Thus, Man started to build wooden and masonry works. With the passing centuries, the builders became masters in the art of building masonry works. Then came the Industrial Revolution and the advent of the steel (1864), which was closely followed by the invention of the reinforced concrete (1855). The need for railways and improving the road network inspired great works of crossing such as viaducts and tunnels. The boom of the railway network and the development of the car required the construction of an increasing number of new structures. This phenomenon continues today with hundreds of structures built each year throughout the world.

Wingfield College and Its Patrons-Peter Bloore 2015 The 650th anniversary of the foundation of Wingfield College was the occasion for a special two-day symposium marking the culmination of a three-year UEA-funded research project into the college and castle. The building projects of the late medieval aristocracy focused on their homes and the monasteries, churches or chantry foundations under their patronage where their family were buried and commemorated. This commemoration allowed a visual celebration of their achievements, status and lineage, the scale and prestige of which reflected on the fortunes of the family as a whole. Wingfield is explored in the context of both the actual building of the castle, chantry chapel and the college, and that of the symbolic function of these as a demonstration ion of aristocratic status. The contributions to this book examine many topics which have hitherto been neglected, such as the archaeology of the castle, which had never been excavated, the complex history of the college's architecture, and the detailed study of the monuments in the church. The latest techniques are used to reconstruct the college and castle, with a DVD to demonstrate these. And the context of the family and its fortunes are explored in chapters on the place of the de la Poles in fifteenth century history, as soldiers, administrators and potential claimants to the throne.
