Digital Image Forensics-Husrev Taha Sencar 2012-08-01 Photographic imagery has come a long way from the pinhole cameras of the nineteenth century. Digital imagery, and its applications, develops in tandem with contemporary society's sophisticated literacy of this subtle medium. This book examines the ways in which digital images have become ever more ubiquitous as legal and medical evidence, just as they have become our primary source of news and have replaced paper-based financial documentation. Crucially, the contributions also analyze the very profound problems which have arisen alongside the digital image, issues of veracity and progeny that demand systematic and detailed response: It looks real, but is it? What camera captured it? Has it been doctored or subtly altered? Attempting to provide answers to these slippery issues, the book covers how digital images are created, processed and stored before moving on to set out the latest techniques for forensically examining images, and finally addressing practical issues such as courtroom admissibility. In an environment where even novice users can alter digital media, this authoritative publication will do much so stabilize public trust in these real, yet vastly flexible, images of the world around us.

The Brief History of the Dead-Kevin Brockmeier 2006-02-14 From Kevin Brockmeier, one of this generation's most inventive young writers, comes a striking new novel about death, life, and the mysterious place in between. The City is inhabited by those who have departed Earth but are still remembered by the living. They will reside in this afterlife until they are completely forgotten. But the City is shrinking, and the residents clearing out. Some of the holdouts, like Luka Sims, who produces the City's only newspaper, are wondering what exactly is going on. Others, like Coleman Kinzler, believe it is the beginning of the end. Meanwhile, Laura Byrd is trapped in an Antarctic research station, her supplies are running low, her radio finds only static, and the power is failing. With little choice, Laura sets out across the ice to look for help, but time is running out. Kevin Brockmeier alternates these two storylines to create a lyrical and haunting story about love, loss and the power of memory.

Spectroscopy in Inorganic Chemistry-C.N.R. Rao 2012-12-02 Spectroscopy in Inorganic Chemistry, Volume I describes the innovations in various spectroscopic methods that are particularly effective in inorganic chemistry studies. This volume contains nine chapters; each chapter discusses a specific spectroscopic method, their fundamental principles, methods, instrumentation, advantages/disadvantages, and application. Chapter 1 covers some of the general principles and experiments that have been used in the recording and interpretation of crystal spectra of molecules that contain transition-metal ions. Chapter 2 illustrates the application of spectroscopic techniques to the photochemistry of small inorganic molecules, non-transition-metal compounds, and transition-metal complexes. The remaining chapters examine several spectroscopic methods, such as matrix isolation, mass, soft X-ray, and Mössbauer spectroscopies, high-resolution NMR, and nuclear quadrupole resonance, with a particular emphasis on their effective application in inorganic chemistry studies. This book will be of great benefit to inorganic chemists, spectroscopists, and inorganic chemistry teachers and students.

Physics for Computer Science Students-Narciso Garcia 2012-12-06 This text is the product of several years' effort to develop a course to fill a specific educational gap. It is our belief that computer science students should know how a computer works, particularly in light of rapidly changing technologies. The text was designed for computer science students who have a calculus background but have not necessarily taken prior physics courses. However, it is clearly not limited to these students. Anyone who has had first-year physics can start with Chapter 17. This includes all science and engineering students who would like a survey course of the ideas, theories, and experiments that made our modern electronics age possible. This textbook is meant to be used in a two-semester sequence. Chapters 1 through 16 can be covered during the first semester, and Chapters 17 through 28 in the second semester. At Queens College, where preliminary drafts have been used, the material is presented in three lecture periods (50 minutes each) and one recitation period per week, 15 weeks per semester. The lecture and recitation are complemented by a two-hour laboratory period per week for the first semester and a two-hour laboratory period biweekly for the second semester.

Shakespeare and the Book Trade-Lukas Erne 2013-04-25 Shakespeare and the Book Trade follows on from Lukas Erne's groundbreaking Shakespeare as Literary Dramatist to examine the publication, constitution, dissemination and reception of Shakespeare's printed plays and poems in his own time and to argue that their popularity in the book trade has been greatly underestimated. Erne uses evidence from Shakespeare's publishers and the printed works to show that in the final years of the sixteenth century and the early part of the seventeenth century, 'Shakespeare' became a name from which money could be made, a book trade commodity in which publishers had significant investments and an author who was bought, read, excerpted and collected on a surprising scale. Erne argues that Shakespeare, far from indifferent to his popularity in print, was an interested and complicit witness to his rise as a print-published author. Thanks to the book trade, Shakespeare's authorial ambition started to become bibliographic reality during his lifetime.

Blessed Are the Consumers-Sallie McFague 2013-01-01 For decades, Sallie McFague has lent her voice and her theological imagination to addressing and advocating for the most important issues of our time. In doing so, she has influenced an entire generation, and empowered countless people in their efforts to put religion in the service of meeting human needs in difficult times. In this timely book, McFague recalls her readers to the practices of restraint. In a world bent on consumption it is imperative that people of religious faith realize the significant role they play in advocating for the earth, and a more humane life for all. The root of restraint, she argues, rests in the ancient Christian notion of Kenosis, or self-emptying. By introducing Kenosis through the life stories of John Woolman, Simone Weil, and Dorothy Day, McFague brings a powerful theological concept to bear in a winsome and readable way.

A Primitive Heart-David Rabe 2007-12-01 Tales from the Tony Award-winning playwright: "Not only an exhibition of David Rabe's acclaimed dramatic powers but also proof of his narrative magic" (Billy Collins, former US Poet Laureate). David Rabe, playwright of Hurlyburly and In the Boom Boom Room, brings his intense vision to the world of fiction with a short story collection of astonishing range and versatility. Whether he is writing about a marriage shadowed by the unacknowledged discord of a risky pregnancy, a group of men whose attempt to settle an account launches them toward unexpected violence, or a young journalist who believes he's escaped his Catholic roots only to be forced again to confront them by a priest who once mentored his writing, Rabe's strong, true voice tenders an inimitable portrait of America and offers benediction to her lost souls. A Primitive Heart confirms the mastery of a writer and establishes David Rabe as an exciting voice in fiction. "Rabe has a way of implicating the reader—of creating a near-claustrophobic bond with his restless characters, writing so convincingly that the subtext becomes almost palpable, accruing darkly, like a storm. Okay: I'm eating my heart out." —Ann Beattie, PEN/Malamud Award-winner "These are gripping stories, hard to put aside, that cut so close to primitive emotional truths that they can be painful to read . . . That vivid confusion—the desire to understand something more primitive than thought—makes these stories unforgettable." —The Seattle Times "David Rabe demonstrates in this new collection of short stories that his talent for dialogue is just as dazzling inside a prose narrative as it is on stage." —The Baltimore Sun

Lithium Ion Rechargeable Batteries-Kazunori Ozawa 2012-01-09 Starting out with an introduction to the fundamentals of lithium ion batteries, this book begins by describing in detail the new materials for all four major uses as cathodes, anodes, separators, and electrolytes. It then goes on to address such critical issues as self-discharge and passivation effects, highlighting lithium ion diffusion and its profound effect on a battery's power density, life cycle and safety issues. The monograph concludes with a detailed chapter on lithium ion battery use in hybrid electric vehicles. Invaluable reading for materials scientists, electrochemists, physicists, and those working in the automobile and electrotechnical industries, as well as those working in computer hardware and the semiconductor industry.

Liquid Pleasures-Professor John Burnett 2012-10-02 Drinking has always meant much more than satisfying the thirst. Drinking can be a necessity, a comfort, an indulgence or a social activity. Liquid Pleasures is an engrossing study of the social history of drinks in Britain from the late seventeenth century to the present. From the first cup of tea at breakfast to mid-morning coffee, to an evening beer and a 'night-cap', John Burnett discusses individual drinks and drinking patterns which have varied not least with personal taste but also with age, gender, region and class. He shows how different ages have viewed the same drink as either demon poison or medicine. John Burnett traces the history of what has been drunk in Britain from the 'hot beverage revolution' of the late seventeenth century - connecting drinks and related substances such as sugar to empire - right up to the 'cold drinks revolution' of the late twentieth century, examining the factors which have determined these major changes in our dietary habits.

Concepts and Models of Inorganic Chemistry-Bodie E. Douglas 1994-02-11 A clear introduction to modern inorganic chemistry, covering both theory and descriptive chemistry. Uses concepts and models as an organizing principle to facilitate students' integration of ideas. This edition contains a new chapter on group theory and offers expanded coverage of solid state. Features numerous figures and solved examples.

The Heart of the Beast-Susan Kohler 2007-11 The Heart of The Beast is a romantic adult full length novel loosely based on the fairytale Beauty and the Beast. Living a simple yet contented life with her family, Beauty must confront The Beast when her brother is ordered to be hanged for a crime he did not commit. Beauty must surrender her body to The Beast in exchange for her brother's freedom. Beauty is shocked to realize that somewhere deep down she finds The Beast attractive and despite his harsh reputation, to also have a seemingly sensitive side he does not readily admit to himself or anyone else. With time Beauty reveals how the power of love can overcome even the hardest heart. About the Author: Susan Kohler, a native Californian, is a writer of romantic/erotic fiction. She is also an active member in the spanking scene and has both seen and done most, if not all, of what she writes about. Her first three books, a full length spanking novel entitled The Paddle Club and two collections of short spanking stories entitled Hot Crossed Buns and Another Batch of Warm Buns were published in 2007.
