Integration for Third Country Nationals in the European Union-Sonia Morano-Foadi 2012-01-01 This highly original book provides an innovative analysis of EU migration and asylum law and its interplay with equality issues in order to assess the current integration framework for third-country nationals and to explore future scenarios in the European Context. Integration for Third-Country Nationals in the European Union focuses on the nexus between non-discrimination based on nationality and race, and the equality clauses covering different categories of regularly residing third-country nationals within EU law. It highlights the extent to which social rights that have been formally promised to non-EU citizens are enjoyed in practice. The contributing authors ð who are both academics and practitioners ð also consider the link between secure residence and equal treatment, highlighting on the implementation of EU Policies in aselection of Member States. Using socio-legal and comparative methods, this study provides an overview of the models of integration and social cohesion shaped by European and national actors in order to profile the present fragmented structure of European society and to discuss future possibilities. Academics, practitioners, and students interested in EU law and migration studies will find this enriching book invaluable.

Managing European Union Enlargement-Helge Berger 2004 Leading international economists assess the effects of the 2004 expansion of the European Union. In May 2004 the European Union will undergo the largest expansion in its history when ten countries – Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia, and Slovenia – become members. The number of new members and their diversity make this "big bang" enlargement particularly challenging. Not only do these countries vary widely in language, culture, and geography, but also their per capita income is less than half that of existing members. EU officials believe that expanded integration will serve the EU's objectives of peace, stability, prosperity, and democracy; but the less abstract questions of costs and benefits of enlargement are more complex. Each of the chapters in this CESifo volume addresses a different aspect of EU expansion. The contributors, all leading international practitioners and scholars, consider such topics as the effect of euro zone expansion on European Central Bank monetary policy making; using the euro as an external anchor for a national currency; worker migration and income differentials; the Swiss experience with immigration policy in a direct democracy framework; detailed sector analysis using a computable general equilibrium model of the world economy; investment and job creation and destruction in incumbent member countries; and the asymmetric effects of enlargement on high- and low-income incumbent countries. Taken together, the chapters provide useful guidance in shaping the EU policies of the future.

Differentiated Integration in the European Union-Benjamin Leruth 2017-10-02 The notion of Differentiated Integration is increasingly used in the literature on European integration. Often employed interchangeably with the notion of "flexible integration, diverging views on its nature have led to the emergence of various definitions and, to some extent, a semantic confusion. A lack of consensus characterizes the academic literature; some authors even avoid putting an explicit definition on the term. The main objective of this book is to seek answers for the following questions: How can one define Differentiated Integration in the European Union? Should Differentiated Integration be considered as a process, a concept, a system or a theory? Should it be seen as a temporary or a well-established phenomenon? How is this field of study likely to develop in the future? In order to do so, all chapters, written by leading experts in the field, offer a state-of-the-art analysis of the study of differentiated integration, from theoretical and practical perspectives. In addition, this book is not a collection of isolated papers: all chapters are interconnected and gravitate towards the aforementioned central questions, but approach these from different perspectives. This book was published as a special issue of the Journal of European Public Policy.

The European Union: Integration and Enlargement-R. Daniel Kelemen 2016-04-14 This book explores one of the central challenges facing the EU today - how to reconcile enlargement with the pursuit of a stronger and more effective European Union. While the relationship between widening and deepening has been recognized for years as one of the big questions in the field of European integration, existing theoretical and empirical analyses of this relationship suffer from a variety of shortcomings. This book brings together a group of EU scholars who significantly advance our understanding of the relationship between widening and deepening. The contributors challenge a variety of 'common wisdoms' concerning the relationship between widening and deepening and offer nuanced theoretical and empirical analysis of the relationship between these two vital dimensions of European integration. Collectively, the contributors to this volume offer the most comprehensive picture available to date of the multi-faceted relationship between widening and deepening. This book was published as a special issue of the Journal of European Public Policy.

Sustainable Development and Environmental Management-Corrado Cini 2010-06-29 This book presents the new EU approach to environmental management and its attempt to place it in the perspective of sustainable development. Written by eminent scientists working on sustainable development, the book covers not only theoretical aspects but also gives practical cases and examples. China and other large and fast growing economies are putting increasing pressures on the global environment, but they are also looking at the European experience with great interest.

The Quest for Environmental Regulatory Integration in the European Union-Eberhard Bohne 2006-01-01 It is a commonplace that pollution knows no borders, and that environmental law must allow for cross-border implementation. The European Union specifies this principle in EC directives on integrated pollution prevention and control (IPPC), on environmental impact assessment (EIA), and on the control of major accident hazards involving dangerous substances (Seveso II). This is the first book to investigate from both empirical and normative perspectives the effectiveness of these directives at the national level. It provides by far the most extensive comparative analysis and evaluation of the industrial permitting and inspections, EIA, and major accident prevention in the EU. Offering an in-depth study of the transposition and implementation of EC environmental directives in eight EU member states (Denmark, France, Germany, Italy, the Netherlands, Spain, Sweden, and the United Kingdom), the author who has played a significant role in the formulation of environmental legislation and regulation at both the national (German) and EU levelsandprovides a stable base for an assessment of the benefits and costs of the integrated approach to environmental protection. Among the factors considered are the following: key features of national constitutional, administraandtive, and judicial systems which provide the framework for environandmental regulations and their implementation in the eight countries under study; procedures and substantive requirements transposing the IPPC, EIA and Seveso II directives into national laws; and evaluation of national deficiencies and the extent of muddling through. The empirical part of Dr Bohne's analysis draws on 138 expert interviews with public and private actors, a survey of 178 public authorities, and document analyses of selected industrial permits and environmental impact statements. His comparative analysis of procedural, organizational, and substantive integration makes it possible to identify and compare national accomplishments in regulatory integration, and offers new insights into the effectiveness and limits of EC law. The study concludes with a discussion of the implications of the findings for European governance and better regulation after the enlargement of the EU. This thoroughly researched, rigorous, and insightful study will be of great interest and value to policymakers, regulators, business people, environmental NGOs, consultants, and lawyers, as well as to students of environmental policies and European governance.

European Citizenship and Social Integration in the European Union-Jürgen Gerhards 2015-05-22 Since 2008, the European Union has been affected by one of the most severe crises in the history of Europe. This book builds on the work of Jürgen Habermas to answer the key question: is Europe strong enough to overcome the recent crisis? Arguing that recovery can only take place if the citizens of Europe regard themselves as members of a socially integrated European society, this volume sets out three conditions for successful European social integration: European citizens mutually respect each other as equals, accepting that all EU citizens should have equal economic, political and social rights. Those citizens objecting to the idea of European equality should not constitute a minority with potential for mobilisation that could impede the ongoing process of European social integration. Europeans act upon their equality beliefs in everyday practice - without differentiating between nationals and EU migrants. Based on a survey carried out in Germany, Spain, Poland and Turkey, the authors argue that the requirements for a socially integrated Europe are largely in place already. Their findings allow for optimism regarding the future of the EU, as the cultural foundations for a democratisation of Europe are laid. This volume develops a theoretical framework of a socially integrated European community, and will be useful for students and scholars of sociology, citizenship studies, social policy, political science and European studies.

International Human Resource Management-P. L. Rao 2008 Managing people in a multinational context is the essence of international human resource management. This requires a broader perspective of what operating internationally involves, and a clear recognition of the range of issues pertaining to all categories of staff operating in different functional, task and managerial capacities. Books that are available on the subject are heavily loaded with cultural aspects rather than HRM processes. From teaching experience, it is noticed that students who are familiar with domestic HRM books find it difficult to comprehend the subject of international HRM. Therefore the topics are arranged in the traditional HRM style with international implications at each stage. A separate chapter is allocated for Expatriation & Repatriation. Similarly Management of People in international context in sixteen countries is discussed in a separate chapter.The text aims to cover in terms of industries, to illustrate the activities and approaches of international organisations. Also, the coverage of different cultures is not intended to include all the different and diverse cultures of the world, simply to enable sufficient understanding of the cultural contexts from which many of the approaches are derived, and to provide background on the appropriateness of different aspects of managing people in international organisations. A detailed treatment to empirical researches on cross cultural issues and cross cultural, comparative management issues arising out of cross border mergers and acquisitions as well as human resource issues emerging out of global acquisitions of Arcelor and Corus by Indian companies and companies of Indian origin are also treated in the text.

Integrated Approach to Environmental Data Management Systems-Nilgun B. Harmanciogammlu 2012-12-06 An integrated approach to environmental data management is necessitated by the complexity of the environmental problems that need to be addresses, coupled with the interdisciplinary approach that needs to be adopted to solve them. Agenda 21 of the Rio Environmental Conference mandated international programmes and organizations to take steps to develop common data and information management plans, and steps have been taken in this direction. The key word that defines the framework of the present book is 'integration'. The book establishes the basics of integrated approaches and covers environmental data management systems within that framework, covering all aspects of data management, from objectives and constraints, design of data collection networks, statistical and physical sampling, remote sensing and GIS, databases, reliability of data, data analysis, and the transformation of data into information.

Construction of a European Institutional Model for Managing Operational Cooperation at the EU's External Borders: Is the FRONTEX Agency a decisive step forward?- 2007

An Integrated Approach to Wastewater Treatment-Manuel Mariño 1999-01-01 The report provides a general approach to deciding the "" where, when, and how much "" in developing and implementing wastewater management interventions. Its scope covers two main considerations: 1) the need to incorporate the general principles that determine water resources management policies into the design and selection of wastewater management and pollution control interventions; and 2) the need to address water quality problems at the appropriate geographical scale, normally at the river basin level. The report looks at the experience of four higher-income countries (France, Germany, Spain, and the United States) in managing wastewater at the river basin level.

Groundwater Management in the East of the European Union-Tomasz Nalecz 2011-01-21 This volume is the result of work carried out under the NATO SPS Study Pilot Project "Sustainable Use and Protection of Groundwater Resources - Transboundary Water Management." It contains basic information on hydrogeological conditions, groundwater management and monitoring in areas of the Belarus, Lithuanian, Polish and Ukrainian borders, simultaneously borders of the European Union with its eastern partners. In view of the importance of the rational utilization of groundwater reserves, which is essential for our future existence, the book presents recommendations for a united methodology of an integrated groundwater monitoring system in this transnational area. The contributions also cover environmental and surface water issues that have direct effects on groundwater resources. The financial dimension of resource mobilization for environmental projects in Eastern Europe also features as part of a complex project solution.

Sustainable Coastal Management-Biliana Cicin Sain 2002-09-30 Proceedings of the NATO Advanced Research Workshop on An Evaluation of Progress in Coastal Policies at the National Level: A Transatlantic and Euro-Mediterranean Perspective held in Ljubljana, Slovenia, from 4-6 July 2001

The EU Border Management Strategy- 2008

Against European Integration-Ivan T. Berend 2019-04-18 This book gives a complex description and discussion of today's populist attacks against the European Union (EU) following the financial crisis of 2008, which opened the floodgates of dissatisfaction, and the migration crisis which destabilized the traditional solidarity basis of the EU. The problem of Brexit is also explored. Each chapter presents one of the main elements of the crisis of the EU. These include West European populism, Central European right-wing populism in power, and the exploitation of the EU's mistake during the migration crisis of the mid-2010s. These also include the discovery of Christian ideology against immigration and hidden anti-Semitic propaganda using a hysterical attack against the liberal billionaire philanthropist George Soros, and Brexit. There is a detailed discussion of the failures of the EU to pacify the neighbourhood in the South and North, especially in Ukraine, and the rising hostile outside enemies of the EU, including Russia and Turkey, bad relationships with Trump's America, and the emergence of a new rival, China, that enters into the Central European edge of the EU. The author explores strategies for coping with, and emerging from, this existential crisis and ends with the alternative plans and possibilities for the future of the eurozone. This will be an invaluable resource for understanding the crisis of the EU, one of the central questions of contemporary international politics for undergraduate and graduate students, and readers interested in the discussion surrounding an endangered European integration and difficult world politics.

Integrating People Management into Public Service Reform-OECD 1996-09-30 Using surveys and selected country case studies, this monograph identifies the factors driving human resource management reforms in the national public administrations of OECD countries.

Transboundary Aquifers in the Eastern Borders of The European Union-Tomasz Nalecz 2012-04-07 This book focuses on sustainable use and protection of transboundary aquifers located along the eastern border of European Union starting from the Baltic Sea and end in the Black Sea. The groundwater resources in this region play a very important role not only as a source of clean and safe drinking water, but also for social, economic and safety reasons. This publication sheds light on a wide range of real problems related to the management of groundwater, problems that are characteristic for most countries situated in the East European region. It also identifies potential threats that may materialise in the absence of cooperation between countries and appropriate measures to jointly manage the shared water resources in the region. Experience from some ongoing projects towards integrated management of transboundary aquifers (research, monitoring and data analysis) is reported. The book is addressed, in particular, to groundwater academics, researchers and experts as well as water management specialists interested in solving environmental issues extended to more than one country territory. On the other hand presented knowledge and experience would be also useful for decision makers especially to support environmental decision processes in border areas and work on preparation of international agreements on groundwater management.

Managing Fiscal Decentralization-Ehtisham Ahmad 2003-08-27 The growth of interest in fiscal decentralization has meant that there has been something of a rush to enshrine this in policy - The World Bank has reported that about seventy countries see this as a major part of their development strategy. This book critically examines the case for decentralization. This collection of contributions comes from a worldwide team of experts, including Albert Breton, Piero Giarda and Anwar Shah. European Union and South Korea-James Harrison 2014-09-10 Written by European and Korean experts in international law, each essay in this volume examines a particular aspect of the legal framework for EU-Korea relations. They analyse the scope and substance of the relevant legal rules, as well as the oppor

Integrated Technologies for Environmental Monitoring and Information Production-Nilgun B. Harmancioglu 2003-10-31 This book presents the proceedings and the outcomes of the NATO Advanced Research Workshop (ARW) on Integrated Technologies for Environmental Monitoring and Information Production, which was held in Marmaris, Turkey, between September 10- 14, 2001. I. With the contribution of 45 experts from 20 different countries, the ARW has provided the opportunity to resolve the basic conflicts that tend to arise between different disciplines associated with environmental data management and to promote understanding between experts on an international and multidisciplinary basis. The prevailing universal problem in environmental data management (EDM) systems is the significant incoherence between data collection procedures and the retrieval of information required by the users. This indicates the presence of problems still encountered in the realization of; (1) delineation of objectives, constraints, institutional aspects of EDM; (2) design of data collection networks; (3) statistical sampling; (4) physical sampling and presentation of data; (5) data processing and environmental databases; (6) reliability of data; (7) data analysis and transfer of data into information; and (8) data accessibility and data exchange at local, regional and global scales. Further problems stem from the lack of coherence between different disciplines involved in EDM, lack of coordination between responsible agencies on a country basis, and lack of coordination on an international level regarding the basic problems and relevant solutions that should be sought.

Thermodynamics-N.A. Gokcen 1996-06-30 This edition of Thermodynamics is a thoroughly revised, streamlined, and cor rected version of the book of the same title, first published in 1975. It is intended for students, practicing engineers, and specialists in materials sciences, metallur gical engineering, chemical engineering, chemistry, electrochemistry, and related fields. The present edition contains many additional numerical examples and prob lems. Greater emphasis is put on the application of thermodynamics to chemical, materials, and metallurgical problems. The SI system has been used through out the textbook. In addition, a floppy disk for chemical equilibrium calculations is enclosed inside the back cover. It contains the data for the elements, oxides, halides, sulfides, and other inorganic compounds. The subject material presented in chapters III to XIV formed the basis of a thermodynamics course offered by one of the authors (R.G. Reddy) for the last 14 years at the University of Nevada, Reno. The subject matter in this book is based on a minimum number of laws, axioms, and postulates. This procedure avoids unnecessary repetitions, often encountered in books based on historical sequence of development in thermodynamics. For example, the Clapeyron equation, the van't Hoff equation, and the Nernst distribution law all refer to the Gibbs energy changes of relevant processes, and they need not be presented as radically different relationships. Company Tax Reform in the European Union-Joann Martens-Weiner 2006-03-14 Having spent almost fifty years of my life defending the separate accou- ing, arm's length pricing method, I have to admit that I was somewhat surprised to be asked to contribute to a book suggesting that the European Union might do well to consider adopting a formulary approach to deal with the taxation of inter and intra company transactions. I was even more surprised to see the invitation coming from Ms. Joann Weiner an ardent co-defender of arm's length pricing and my strong right arm in that regard while we both served in the U.S. Treasury Department in the mid '90s. The book gives Ms Weiner the opportunity to comment frankly from an insider's perspective of the many admitted problems of the arm's length system which could be avoided by a formulary approach. Ms. Weiner brings to this project a thorough expert knowledge of the b- efits and shortfalls of each of the systems she discusses - separate accounting v. formulary apportionment. Who better to decide to give qualified support to formulary than someone who organized a U.S. Treasury conference to defend arm's length pricing against a Congressional challenge in favor of formulary apportionment.

Research Handbook on the Economics of European Union Law-Thomas Eger 2012-01-01 This comprehensive volume comprises original essays by authors well known for their work on the European Union. Together they provide the reader with an economic analysis of the most important elements of EU law and the mechanisms for decisions within the EU. The Handbook focuses particularly on how the development of EU law negotiates the tension between market integration, national sovereignty and political democracy. The book begins with chapters examining constitutional issues, while further chapters address the establishment of a single market. The volume also addresses sovereign debt problems by providing a detailed analysis of the architecture of the EU's monetary institutions, its monetary policy and their implications. The depth and breadth of the Handbook's coverage make it an essential reference for students, scholars and policymakers interested in the complexities of the European Union.

Integrated River Basin Management through Decentralization-Karin Kemper 2007-02-17 Drawing upon a worldwide survey of river basin organizations and in-depth studies of eight river basins in a variety of locations around the globe, this book examines how institutional arrangements for managing water resources at the river-basin level have been designed and implemented, the impetus for these arrangements, and what institutional features appear to be associated with greater or lesser success in river basin management.

Selected Readings on Information Technology and Business Systems Management-Lee, In 2008-08-31 "This book presents quality articles focused on key issues concerning technology in business"--Provided by publisher.

Environmental Information in European Transboundary Water Management-J. Timmerman 2003-01-01 Environmental Information in European Transboundary Water Management aims to examine the role of information in transboundary river basin and water management, and the way it is used (or not) in policy and decision and decision-making within the wider European area. While having forward-looking perspective justified by the ongoing implementation of the EU water Framework Directive among EU Member States and Candidates Countries, many of the chapters draw on the experiences gained from the past and existing transboundary river basin co-operation experiences. Chapters are organised according to a framework that shows the sharing of water resources to be based upon a foundation of integrated water resources management, supported by three pillars: Politics - concerned with the enabling of sharing water resources, including the recognition of differences in riparian interests and international collaboration. Technical cooperation - concerned with concrete co-operation including exchange of information; tools and techniques to produce, use and disseminate information; joint research programmes; joint river basin plans; and joint ventures i.e. jointly performed water management actions.Legal-institutional - dealing with institutions and legal instruments that support the vision of fair and equitable sharing of international water resources; this pillar finds its basis in internationally laid down principles of cross border co-operation. Environmental Information in European Transboundary Water Management will appeal to professionals involved in the various aspects of transboundary river basin co-operation, both on strategic and operational levels, but also to the academic community concerned with the study of transboundary river basin or water management. It will also be an important source for graduate students in (transboundary) river basin management.

Financial management in the European Union-Great Britain: National Audit Office 2010-06-11 There has been a detectable improvement over the years in the financial management of European funds across the European Union. This title reports that the European Court of Auditors provided a positive Statement of Assurance, without qualification, on the reliability of the European Union's accounts for 2008.

Integrated Pest Management-David Pimentel 2014-04-10 The book deals with the present state and problems of integrated pest management as relating to stakeholder acceptance of IPM and how integrated pest management can become a sustainable practice. The discussions include using less pesticides and the possibility of eliminating pesticides from agricultural practice. Integrated Pest Management-Edward B. Radcliffe 2009-01-01 This textbook presents theory and concepts in integrated pest management, complemented by two award-winning websites covering more practical aspects.

International Conference on Coastal Management 2003-Robin McInnes 2003 This volume presents the proceedings of the fifth international conference on coastal management, held 15-17 October 2003 in Brighton. The purpose of the conference was to translate policy into practice in terms of the management of coastal zones within the overall goal of achieving sustainable development. The objectives of the conference were fully supported by the Eurpean Commission and Defra, the lead government department for coastal issues in the UK.

Demystifying the European Union-Roy H. Ginsberg 2007 The European Union, the world's greatest experiment in interstate reconciliation through regional integration is now fifty years old. However, it remains a mystery to many people in and outside Europe. This clear and comprehensive book is dedicated to 'demystifying' the EU for both introductory and seasoned students of European integration. Roy H. Ginsberg begins with the foundation blocks of history, law, economics, and politics to provide the context for understanding integration. He then deconstructs the EU into its individual elements to examine them in relation to one another and to the whole before reconstructing the EU as a single polity. In doing so, he evaluates the EU's scope for agency and its effects on Europeans and non-Europeans alike. Emphasizing this wider perspective, Ginsberg convincingly demonstrates that the EU is a wellspring of support for conflict prevention and resolution throughout the world. Integrated Water Resources Management-Miguel A. Marino 2001

Multi-Stakeholder Platforms for Integrated Water Management-Dr Jeroen Warner 2012-11-28 As they provide a negotiating space for a diversity of interests, Multi-Stakeholder Platforms (MSPs) are an increasingly popular mode of involving civil society in resource management decisions. This book focuses on water management to take a positive, if critical, look at this phenomenon. Illustrated by a wide geographical range of case studies from both developed and developing worlds, it recognizes that MSPs will neither automatically break down divides nor bring actors to the table on an equal footing, and argues that MSPs may in some cases do more harm than good. The volume then examines how MSPs can make a difference and how they might successfully co-opt the public, private and civil-society sectors. The book highlights the particular difficulties of MSPs when dealing with integrated water management programmes, explaining how MSPs are most successful at a less complex and more local level. It finally questions whether MSPs are - or can be - sustainable, and puts forward suggestions for improving their durability.

Differentiated Integration-Dirk Leuffen 2012-10-03 Far from displaying a uniform pattern of integration, the European Union varies significantly across policy areas, institutional development and individual countries. Why do some policies such as the Single Market attract non-EU member states, while some member states choose to opt out of other EU policies? In answering these questions, this innovative new text provides a state-of-the-art introduction to the study of European integration. The authors introduce the most important theories of European integration and apply these to the trajectories of key EU policy areas - including the single market, monetary policy, foreign and security policy, and justice and home affairs. Arguing that no single theory offers a completely convincing explanation of integration and differentiation in the EU, the authors put forward a new analytical perspective for describing and explaining the institutions and policies of the EU and their development over time. Written by a team of prominent scholars in the field, this thought-provoking book provides a new synthesis of integration theory and an original way of thinking about what the EU is and how it works.

Managing Ethnic Diversity After 9/11-Ariane Chebel d'Appollonia 2010 A collection of essays addresses how United States, Great Britain, France, Germany, Spain, Italy and the Netherlands have integrated ethnic minorities, especially Arabs and Muslims, since 9/11, arguing that poor integration has infringed on the rights of minorities and threatened national security.

The Mediterranean Dimension of the European Union's Internal Security-S. Wolff 2012-09-27 EU internal security concerns such as migration, police and judicial cooperation are today part of EU foreign policy. This book shows how those concerns dominate the EU agenda towards Mediterranean countries. Adopting a rational-choice institutionalist approach, it explores EU policy and the strategic choices made after the 2011 Arab revolts.

Toward Integrated Water Resources Management in Armenia-Winston Yu 2014-10-20 This study takes stock of the current water resources management in Armenia, including diagnosing the main sub-sectors (agriculture, urban, environment, and energy), reviewing the institutional framework and implementation status of water-sector policies, identifying the main challenges and making recommendations on the next steps.

Integrated Transboundary Water Management in Theory and Practice-Geoffrey D. Gooch 2006-06-30 This book will examine and analyse the problems inherent in integrated water management in transboundary conditions. Integrated Transboundary Water Management in Theory and Practice will provide new knowledge and policy recommendations based on the experiences and results of a major 3-year interdisciplinary research project (MANTRA-East). Drawing on extensive studies of the Lake Peips region in Estonia and Russia, the book explores the political and social issues surrounding transboundary water management and introduces the way that qualitative-quantitative-qualitative scenarios have been used in real-life situations. The book presents conclusions and policy recommendations for integrated transboundary water management that will be invaluable to water managers, policy-makers and academic researchers working in this rapidly expanding field.

Model Law on Sustainable Management of Coastal Zones and European Code of Conduct for Coastal Zones-Council of Europe 2000-01-01 Coastal areas have experienced unprecedented dramatic changes in the last half of the 20th century, especially in zones used for tourism development. This code of conduct and model law on coastal areas establishes some general management principles aimed at the sustainable development of coastal areas and the preservation of their environmental values.

EU Foreign Policy and Crisis Management Operations-Benjamin Pohl 2014-03-21 This book explores the drivers of the EU's recent forays into peace- and state-building operations. Since the Union's European (now Common) Security and Defence Policy (ESDP/CSDP) became operational in 2003, the EU has conducted more than 20 civilian and military operations that broadly served to either deter aggression in host countries, and/or to build or strengthen the rule of law. This sudden burst of EU activity in the realm of external security is interesting from both a scholarly and a policy perspective. On one hand, institutionalised cooperation in the field of foreign, security and defence policy challenges the mainstream in IR theory which holds that in such sovereignty-sensitive areas cooperation would necessarily be limited. On the other hand, the sheer quantity of operations suggests that the ESDP may represent a potentially significant feature of global governance. In order to understand the drivers behind CSDP, EU Foreign Policy and Crisis Management Operations analyses the policy output in this area, including the operations conducted in the CSDP framework. Up until now, many studies inferred the logic behind CSDP from express intentions, institutional developments and (the potential of) pooled capabilities. By mining the rich data that CSDP operations represent in terms of the motives and ambitions of EU governments for the CSDP, this book advances our understanding of the framework at large. This book will be of much interest to students of European Security, EU policy, peacebuilding, statebuilding, and IR.
