1985 The EnviroTIPS series of manuals was developed to fill a need for in-depth spill countermeasures and strategy planning information for top priority substances. Each manual is intended as a monograph containing information relevant to its behaviour, control, dispersion, effects, and cleanup of spills. The emphasis is on environmental effects, and the focus is on Canadian conditions from material, legislative and climatic standpoints. General principles of spill response are not discussed; rather, the available literature is summarized as it relates to a specific substance and to spills of that substance. This manual is an introduction, outlining the intent and direction of each section; it provides the necessary theoretical bases for calculations included in each manual. In addition, the definitions of the terms appearing in EnviroTIPS manuals are given.

ppk on JavaScript-Peter-Paul Koch 2006-09-26 Whether you're an old-school scripiter who needs to modernize your JavaScripting skills or a standards-aware Web developer who needs best practices and code examples, you'll welcome this guide from a JavaScript master. Other JavaScript books use example scripts that have little bearing on real-world Web development and are useful only in the chapter at hand. In contrast, Peter-Paul Koch's book uses eight real-world scripts he created for real-world clients in order to earn real-world money. That means the scripts are guaranteed to do something useful (and sellable!) that enhances the usability of the page they're used on. The book's example scripts include one that sorts a data table according to the user's search queries, a form validation script, a script that shows form fields only when the user needs them, a drop-down menu, and a data retrieval script that uses simple Ajax and shows the data in an animation. After an overview of JavaScript's purpose, Peter-Paul provides theoretical chapters on the context (jobs for JavaScript, CSS vs. JavaScript), the browsers (debugging, the arcana of the browser string), and script preparation. Then follow practical chapters on Core, BOM, Events, DOM, CSS Modification, and Data Retrieval, all of which are explained through a combination of theoretical instruction and the taking apart of the relevant sections of the example scripts.
