Toxicology is a scientific discipline, overlapping with biology, chemistry, pharmacology, and medicine, that involves the study of the adverse effects of chemical substances on living organisms and the practice of diagnosing and treating exposures to toxins and toxicants. The relationship between dose and its effects on the exposed organism is of high significance in toxicology.

Toxicology - Wikipedia

Today, one way of looking at toxicology divides it into six applied areas - clinical, forensic, analytical, environmental, occupational, and regulatory. Clinical toxicology, the diagnosis and treatment of human poisoning, and forensic toxicology, the medical-legal aspects of clinical poisoning, are discussed further in a later slide.
