The Ultimate IQ Book-Marcel Feenstra 1993

The Mismeasure of Man (Revised and Expanded)-Stephen Jay Gould 2006-06-17 The definitive refutation to the argument of The Bell Curve. When published in 1981, The Mismeasure of Man was immediately hailed as a masterwork, the ringing answer to those who would classify people, rank them according to their supposed genetic gifts and limits. And yet the idea of innate limits—of biology as destiny—dies hard, as witness the attention devoted to The Bell Curve, whose arguments are here so effectively anticipated and thoroughly undermined by Stephen Jay Gould. In this edition Dr. Gould has written a substantial new introduction telling how and why he wrote the book and tracing the subsequent history of the controversy on innateness right through The Bell Curve. Further, he has added five essays on questions of The Bell Curve in particular and on race, racism, and biological determinism in general. These additions strengthen the book's claim to be, as Leo J. Kamin of Princeton University has said, "a major contribution toward deflating pseudo-biological 'explanations' of our present social woes."

The Cailiffs of Baghdad, Georgia: A Novel-Mary Helen Stefaniak 2011-09-19 Narrator Gladys Cailiff is eleven years old in 1938 when a worldly schoolteacher turns the small town of Threestep, Georgia, upside down. Miss Grace Spivey defies the traditional curriculum and racial boundaries alike, regaling her charges with readings from the Thousand Nights and a Night and casting a gifted African American student as "chief engineer" of the town's annual festival, newly reinvented as the Baghdad Bazaar. But her progressive actions are not without consequence and ultimately culminate in a night of death-defying stories that take readers on a magic carpet ride from a schoolroom in the South to the banks of the Tigris (and back again).

Carnival of the Animals-John Lithgow 2007-09-18 A mischievous boy slips away from his teacher during a field trip to a natural history museum and, after the museum closes, sees all of the people he knows transformed into animals.

A Wrinkle in Time-Madeleine L'Engle 2019-07-18 A Wrinkle in Time is the winner of the 1963 Newbery Medal. It was a dark and stormy night—Meg Murry, her small brother Charles Wallace, and her mother had come down to the kitchen for a midnight snack when they were upset by the arrival of a most disturbing stranger. "Wild nights are my glory," the unearthly stranger told them. "I just got caught in a downdraft and blown off course. Let me sit down for a moment, and then I'll be on my way. Speaking of ways, by the way, there is such a thing as a tesseract." A tesseract (in case the reader doesn't know) is a wrinkle in time. To tell more would rob the reader of the enjoyment of Miss L'Engle's unusual book. A Wrinkle in Time, winner of the Newbery Medal in 1963, is the story of the adventures in space and time of Meg, Charles Wallace, and Calvin O'Keefe (athlete, student, and one of the most popular boys in high school). They are in search of Meg's father, a scientist who disappeared while engaged in secret work for the government on the tesseract problem.

Outliers-Malcolm Gladwell 2008-11-18 From the bestselling author of Blink and The Tipping Point, Malcolm Gladwell's Outliers: The Story of Success overturns conventional wisdom about genius to show us what makes an ordinary person an extreme overachiever. Why do some people achieve so much more than others? Can they lie so far out of the ordinary? In this provocative and inspiring book, Malcolm Gladwell looks at everyone from rock stars to professional athletes, software billionaires to scientific geniuses, to show that the story of success is far more surprising, and far more fascinating, than we could ever have imagined. He reveals that it's as much about where we're from and what we do, as who we are - and that no one, not even a genius, ever makes it alone. Outliers will change the way you think about your own life story, and about what makes us all unique. 'Gladwell is not only a brilliant storyteller; he can see what those stories tell us, the lessons they contain' Guardian 'Malcolm Gladwell is a global phenomenon ... he has a genius for making everything he writes seem like an impossible adventure' Observer 'He is the best kind of writer - the kind who makes you feel like you're a genius, rather than he's a genius' The Times Where the Red Fern Grows-Wilson Rawls 2011-01-12 A beloved classic that captures the powerful bond between man and man's best friend. Billy has long dreamt of owning not one, but two, dogs. So when he's finally able to save up enough money for two pups to call his own—Old Dan and Little Ann—he's ecstatic. It doesn't matter that times are tough; together they'll roam the hills of the Ozarks. Soon Billy and his hounds become the finest hunting team in the valley. Stories of their great achievements spread throughout the region, and the combination of Old Dan's brawn, Little Ann's brains, and Billy's sheer will seems unbeatable. But tragedy awaits these determined hunters—now friends—and Billy learns that hope can grow out of despair, and that the seeds of the future can come from the scars of the past. The Development of Intelligence in Children-Alfred Binet 1916 "This book of reprinted articles from the journal "L'Année Psychologique" as a whole constitutes a complete history and exposition of the Measuring Scale as Binet left it. In Chapter I the authors show the origin of the Scale and their first methods of attacking the problem. Chapter II describes the first results--a series of test questions arranged in order of difficulty but not yet assigned to definite years. An immense amount of work had been done on this series, and the authors may have been justly proud of what they had accomplished, though it was soon to be largely discarded for a much more useful plan. This was the so called "1905 Tests." Chapter III shows the laborious and painstaking methods of standardization. Nowhere does Binet more clearly show his genius. It is here that he has taught us the method which must be used in all extensions or revisions of the Scale.

that lay any claim to scientific value. In Chapter IV he gives us the Measuring Scale for Intelligence--the so called 1908 Scale. It is the most complete statement of the Scale. Chapter V gives some of his later 1911 corrections and revisions--his last word on the subject. In making up this book we have attempted to include everything Binet and Simon wrote explanatory of the Scale. The reader will find many repetitions and some contradictions, and the date of each article should be taken into account in deciding which is the authoritative statement. It has been thought best to include all of these repetitions and contradictions, in order to show the development of Binet's own thought in regard to his Scale. Only in this way does the marvelous work that he did on this subject become fully appreciated"--Introduction. (PsycINFO Database Record (c) 2006 APA, all rights reserved)
