Symbolic Action Theory and Cultural Psychology-Ernest E. Boesch 2012-12-06 Gustav Jahoda University of Strathclyde Ever since psychology emerged as a separate discipline about a century ago, there have been differing views as to what it is or ought to be. Some, like Ebbinghaus, saw it as a budding natural science, experimental and quantitative. Others, like Dilthey, regarded psychology in the main as a humane field of study, historical and interpretative in character. The dichotomy of "explaining" versus "understanding" has been a subject of debate ever since. Regrettably, most of the protagonists of these respective positions tend to view them as mutually exclusive, in spite of the fact that already Wundt had stressed that "hard" experimental and "soft" Volkpsychologie are both equally important. For the major part of the present century the field has been largely dominated by advocates of "hard-nosed" scientific approaches, typified first by Behaviorism and, latterly, cognitive psychology which concentrates on central processes involved in cognition. Without in any way wishing to denigrate the undoubted achievements of cognitive psychology, it has its limitations that are epitomized by T. H. Huxley's dictum "The great end of life is not knowledge but action". This might well serve as the motto for the action theory of Ernest Boesch, who is one of several prominent psychologists out of harmony with the prevailing ethos. They travel under different banners such as "social constructivism", "ethogenics" or "hermeneutics", but all share reservations about what many feel is the arid "scientism" of the mainstream.

sustainable. The book is divided into nine sections that examine traditional themes (social construction and deconstruction of diversity, intergenerational transitions and memories of war, and multiculturalism), as well as contemporary issues such as Europe's "migration crisis", radicalization and violent extremism, and violence in families, schools and communities. Chapters contextualize each issue within specific social ecological frameworks in order to reflect on the multiplicity of influences that affect different outcomes and to discuss how the findings can be applied in different contexts. The volume also provides solutions and hope through its focus on youth empowerment and peacebuilding programs for children and families. This forward-thinking volume offers a multitude of views, approaches, and strategies for research and activism drawn from peace psychology scholars and United Nations researchers and practitioners. This book's multi-layered emphasis on context, structural determinants of peace and conflict, and use of research for action towards social cohesion for children and youth has not been brought together in other peace psychology literature to the same extent. *Children and Peace: From Research to Action* will be a useful resource for peace psychology academics and students, as well as social and developmental psychology academics and students, peace and development practitioners and activists, policy makers who need to make decisions about the matters covered in the book, child rights advocates and members of multilateral organizations such as the UN.

Psychological Experts in Divorce Actions-Marc J. Ackerman 2005 Emotionally charged issues abound in matrimonial practice, especially in custody disputes. Expert testimony can have a dramatic impact on the outcome of a case, and when matters are highly sensitive or sensational the seeming objectivity of an expert can be dispositive. To effectively reinforce or question that testimony, certain specialized knowledge is essential. Scientifically accepted standards and theories are constantly evolving. Keeping up with the data had been a challenge, but one integrated resource has made it simple. Aspen Publishers' Psychological Experts in Divorce Actions pulls all the research together into the definitive guide to understanding the role of psychological evaluations in divorce and custody actions. Focused on providing the best approach to protecting your client's interests, this work explains all the leading testing instruments, what conclusions may be drawn and how to challenge or support those conclusions. In addition to offering effective examination and cross-examination strategies, it assists you in handling the gamut of psychological factors that affect clients in divorce and custody cases. Authors Marc J. Ackerman, Ph.D., and Andrew W. Kane, Ph.D., are licensed psychologists who have been involved in hundreds of custody cases. Drawing on their extensive experience--testing parties to a divorce and treating psychological patients in the clinic--and as psychological experts in the courtroom, they identify the most important psychological evaluation research used in divorce and custody decision-making and distill the information into clear terms lawyers can readily apply. They also examine vital issues including: Ethics--confidentiality, privilege, duty to warn or protect (Tarasoff), sharing raw data, test integrity Sexual abuse--bona fide or fabricated allegations, psychological effects of sexual abuse, profiles of abuser and abused Testing--personality tests (including MMPI-2, and the new MMPI-2-RF, Rorschach, Millon, TAT); intelligence tests (Wechsler scales, Kaufman scales, Stanford Binet); custody tests (ASPECT, PCRI, PASS,
