Participatory Action Research Approaches and Methods-Sara Kindon 2007-12-18 Participatory Action Research (PAR) approaches and methods have seen an explosion of recent interest in the social and environmental sciences. PAR involves collaborative research, education and action which is oriented towards social change, representing a major epistemological challenge to mainstream research traditions. It has recently been the subject of heated critique and debate and rapid theoretical and methodological development. This book captures these developments, exploring the justification, theorisation, practice and implications of PAR. It offers a critical introduction to understanding and working with PAR in different social, spatial and institutional contexts. The authors engage with PAR's radical potential, while maintaining a critical awareness of its challenges and dangers. The book is divided into three parts. The first part explores the intellectual, ethical and pragmatic contexts of PAR; the development and diversity of approaches to PAR; recent poststructuralist perspectives on PAR as a form of power; the ethic of participation; and issues of safety and well-being. Part two is a critical exploration of the politics, places and practices of PAR. Contributors draw on diverse research experiences with differently situated groups and issues including environmentally sustainable practices, family livelihoods, sexual health, gendered experiences of employment, and specific communities such as people with disabilities, migrant groups, and young people. The principles, dilemmas and strategies associated with participatory approaches and methods including diagramming, cartographies, art, theatre, photovoice, video and geographical information systems are also discussed. Part three reflects on how effective PAR is, including the analysis of its products and processes, participatory learning, representation and dissemination, institutional benefits and challenges, and working between research, action, activism and change. The authors find that a spatial perspective and an attention to scale offer helpful means of negotiating the potentials and paradoxes of PAR. This approach responds to critiques of PAR by highlighting how the spatial politics of practising participation can be mobilised to create more effective and just research processes and outcomes. The book adds significant weight to the recent critical reappraisal of PAR, suggesting why, when, where and how we might take forward PAR's commitment to enabling collaborative social transformation. It will be particularly useful to researchers and students of Human Geography, Development Studies and Sociology.

Rediscovering Geography-Rediscovering Geography Committee 1997-04-11 As political, economic, and environmental issues increasingly spread across the globe, the science of geography is being rediscovered by scientists, policymakers, and educators alike. Geography has been made a core subject in U.S. schools, and scientists from a variety of disciplines are using analytical tools originally developed by geographers. Rediscovering Geography presents a broad overview of geography's renewed importance in a changing world. Through discussions and highlighted case studies, this book illustrates geography's impact on international trade, environmental change, population growth, information infrastructure, the condition of cities, the spread of AIDS, and much more. The committee examines some of the more significant tools for data collection, storage, analysis, and display, with examples of major contributions made by geographers. Rediscovering Geography provides a blueprint for the future of the discipline, recommending how to strengthen its intellectual and institutional foundation and meet the demand for geographic expertise among professionals and the public.

Legal Geography-Tayanah O'Donnell 2019-12-06 This book is the first legal geography book to explicitly engage in method. It complements this by also bringing together different perspectives on the emerging school of legal geography. It explores human-environment interactions and showcases distinct environmental legal geography scholarship. Legal Geography: Perspectives and Methods is an innovative book concerned with a new relational and material way of examining our legal-spatial world. With chapters examining natural resource management, Indigenous knowledge and political ecology scholarship, the text introduces legal geography's modes of analysis and critique. The book explores topics such as Indigenous environmental rights, the impacts of extractive industries, mediation of climate change, food, animal and plant patents, fossil fuels, mining and coastal environments based on empirical, jurisdictional and methodological insights from Australia, New Zealand and the Asia-Pacific to demonstrate how space and place are invoked in legal processes and contestations, and the methods that may be employed to explore these processes and contestations. This book examines the role of legal geographies in the 21st century beyond the simple "law in action", and it will thus appeal to students of socio-legal studies, human geography, environmental studies, environmental policy, as well as politics and international relations.

Research Methods in Practice-Dahlia K. Remler 2014-03-24 The Second Edition of Research Methods in Practice: Strategies for Description and Causation sets an entirely new standard for presenting and learning research methods. Geography, Art, Research-Harriet Hawkins 2020-09-28 This book explores the intersection of geographical knowledge and artistic research in terms of both creative methods and practice-based research. In doing so it brings together geography's 'creative turn' with the art world's 'research turn.' Based on a decade and a half of ethnographic stories of working at the intersection of creative arts practices and geographical research, this book offers a much-needed critical account of these forms of knowledge production. Adopting a geohumanities approach to investigating how these forms of knowledge are produced, consumed, and circulated, it queries what imaginaries and practices of the key sites of knowledge making (including the field, the artist's studio, the PhD thesis, and the exhibition) emerge and how these might challenge existing understandings of these locations. Inspired by the geographies of science and knowledge, art history and theory, and accounts of working within and beyond disciplines, this book seeks to understand the geographies of research at the intersection of geography and creative arts practices, how these geographies challenge existing understandings of these disciplines and practices, and what they might contribute to our wider discussions of working beyond disciplines, including through artistic research. This book offers a timely contribution to the emerging fields of artistic research and geohumanities, and will appeal to undergraduate and postgraduate students and researchers.
