European Perspectives on Learning Communities and Opportunities in the Maker Movement-Barker, Bradley S. 2019-01-11 While some manufacturing experts see the maker movement as a step back in education and production, the movement presents a learn-by-doing approach to emerging professionals. Making is a method that takes some resources and modifies these resources in a way that makes the sum more valuable than the parts. European Perspectives on Learning Communities and Opportunities in the Maker Movement is a collection of innovative research on the methods and applications of value creation and problem solving within European learning communities. While highlighting topics including alternative learning methods, biomimetics, connected learning theory, and gentrification, this book is ideally designed for entrepreneurs, business professionals, manufacturers, carpenters, production experts, educators, academicians, industry professionals, researchers, and students seeking current research on the maker movement with examination through case studies.

Risomania-John Z. Komurki 2017 Risography, named after the Japanese firm Riso, is a stencil printing process based on screen printing techniques that was developed in the transition phase from mechanical to digital printing. Although the printer looks like a copying machine, the colors are transferred onto the paper without the use of heat or chemicals, saving energy and making the process ecologically friendly. Graphic artists and designers from around the world have now rediscovered the risograph for themselves - along with other machines for similar almost forgotten techniques such as mimeography -and sparked an unexpected renaissance of analog printing. A comprehensive introduction that addresses past, present and future is followed by an essay about the key pioneers in the contemporary risography scene. In the chapter Risoworld notable risography-oriented publishers, printers and design studios from around the world are presented. At the heart of the book are fabulous, hugely diverse examples such as postcards, magazines, posters, flyers and experimental printed products, all of which inspire by the force of their color, their unique textures and, above all, the perfectly imperfect authenticity of risography.

This beautifully designed book shows how the seemingly mundane objects that populate desks and cubicles everywhere are now being re-imagined as collector's items. And as today's trendsetting artists and designers are increasingly returning to non-digital techniques and methods, letterpress stationery, typewriters, and ink pens have developed the cache of vintage fashion and cars. Stationery Fever showcases the plethora of retro and fine office goods being produced and sold around the world. Organized like your favorite stationery store--pencils, pens, notebooks, erasers, greeting cards, school supplies, etc.-- it features exquisitely photographed objects that transcend the decades since laptops took over most of our office needs. Each chapter highlights distinct objects and features a store that specializes in that category. Along the way, readers will learn the history

Two-Buck Chuck & The Marlboro Man-Frank Bergon 2019-03-06 Frank Bergon's astonishing portrayals of people in California's San Joaquin Valley reveal a country where the culture of a vanishing West lives on in many twenty-first-century Westerners, despite the radical technological transformations around them. All are immigrants, migrants, their children, or their grandchildren whose lives intertwine with the author's, including several races and ethnicities: Chicanos, Mexicans, African Americans, Italians, Asians, Native Americans, Scots-Irish descendants of Steinbeck's Okies, and Basques of the author's own heritage. Bergon presents a powerful array of rural and small-town Westerners who often see themselves as part of a region and a way of life most Americans aren't aware of or don't understand, their voices unheard, their stories untold. In these essays, Westerners from the diverse heritage of the San Joaquin Valley include California's legendary Fred Franzia, the maker of the world's best-selling Charles Shaw wines dubbed "Two-Buck Chuck," and Darrell Winfield, a Dust Bowl migrant and lifelong working cowboy who for more than thirty years reigned as the iconic Marlboro Man. Their voices help us understand the complexities of today's rural West, where Old West values intersect with New West realities. This is the West (and America today)—a region in conflict with itself.

Network Science, A Decade Later-Alan Feldman 2000-01-12 Network Science, A Decade Later--the result of NSF-funded research that looked at the experiences of a set of science projects which use the Internet--offers an understanding of how the Internet can be used effectively by science teachers and students to support inquiry-based teaching and learning. The book emphasizes theoretical and critical perspectives and is intended to raise questions about the goals of education and the ways that technology helps reach those goals and ways that it cannot. The theoretical perspective of inquiry-based teaching and learning in which the book is grounded is consistent with the current discipline-based curriculum standards and frameworks. The chapters in Part I, "State of the Art," describe the history and current practice of network science. Those in Part II, "Looking Deeply," extend the inquiry into network science by examining discourse and data in depth, using both empirical data and theoretical perspectives. In Part III, "Looking Forward," the authors step back from the issues of network science to take a broader view, focusing on the question: How should the Internet be used--and not used--to support student learning? The book concludes with a reminder that technology will not replace teachers. Rather, the power of new technologies to give students both an overwhelming access to resources--experts, peers, teachers, texts, images, and data--and the opportunity to pursue questions of their own design, increases the need for highly skilled teachers and forward-looking administrators. This is a book for them, and for all educators, policymakers, students involved in science and technology education.
