Outsmart Waste-Tom Szaky 2014-01-14 "Garbage doesn't exist in nature--the output of one organism is the useful input of another. So why does garbage exist in the human system? Why did it only become a problem the past century? And most importantly, how can we eliminate it--outsmart the very idea of garbage? Eco-entrepreneur Tom Szaky says that to outsmart waste first we have to understand it, then change how we create it, and finally rethink what we do with it. He traces the roots of our current garbage crisis to 20th century technological advances that resulted in historic changes in consuming habits--both the amount of garbage created and its longevity increased dramatically. Szaky argues we can turn this around by changing what we buy, when we buy, why we buy, and what we do with what we've bought. And through innovative recycling and creative "upcycling" (creating new products from discarded objects) we can stop seeing garbage as useless waste and start seeing it as useful waste--a tremendous volume of resources that are simply misunderstood. After reading this mind-expanding book you will never think of garbage the same way again"--

Taking out the Garbage-Robert Clayton Buick 2010-09-29 The front cover of this book depicts the true and fatal wounds to President John F. Kennedy that was never revealed by the Warren Commission or by the official autopsy report. Instead, the United States Government and high ranking government officials responsible for the assassination of President Kennedy covered up the truth in an attempt to hide the coup de tat assassination. This is the story of Jimmy Sutton the Mafia Grassy Knoll Shooter who fired the fatal shot to the right temple of President Kennedy ordered and carried out by Organized Crime. Lee Harvey Oswald never fired a shot at President Kennedy. The author Robert Clayton Buick who was aware of the plot prior to the assassination of President Kennedy pulls no punches as he clarifies and substantiates every element of the hit on the President of the United States, the crime of the century for financial gain, political power and vengeance. This is a nonfictional and true depiction of what really happened that fateful day in Dallas.

Encyclopedia of Consumption and Waste-Carl A. Zimring 2012-02-27 Archaeologists and anthropologists have long studied artifacts of refuse from the distant past as a portal into ancient civilizations, but examining what we throw away today tells a story in real time and becomes an important and useful tool for academic study. Trash is studied by behavioral scientists who use data compiled from the exploration of dumpsters to better understand our modern society and culture. Why does the average American household send 470 pounds of uneaten food to the garbage can on an annual basis? How do different societies around the world cope with their garbage in these troubled environmental times? How does our trash give insight into our attitudes about gender, class, religion, and art? The Encyclopedia of Consumption and Waste explores the topic across multiple disciplines within the social sciences and ranges further to include business, consumerism, environmentalism, and marketing to comprise an outstanding reference for academic and public libraries.

Garbage Citizenship-Rosalind Fredericks 2018-09-28 Over the last twenty-five years, garbage infrastructure in Dakar, Senegal, has taken center stage in the struggles over government, the value of labor, and the dignity of the working poor. Through strikes and public dumping, Dakar's streets have been periodically inundated with household garbage as the city's trash collectors and ordinary residents protest urban austerity. Often drawing on discourses of Islamic piety, garbage activists have provided a powerful language to critique a neoliberal mode of governing-through-disposability and assert rights to fair labor. In Garbage Citizenship Rosalind Fredericks traces Dakar's volatile trash politics to recalibrate how we understand urban infrastructure by emphasizing its material, social, and affective elements. She shows how labor is a key component of infrastructural systems and how Dakar's residents use infrastructures as a vital tool for forging collective identities and mobilizing political action. Fleshing out the materiality of trash and degraded labor, Fredericks illuminates the myriad ways waste can be a potent tool of urban control and rebellion.

Gone Tomorrow-Heather Rogers 2013-03-05 "A galvanizing exposé" of America's trash problem from plastic in the ocean to "wasteful packaging, bogus recycling, and flawed landfills and incinerators" (Booklist, starred review). Eat a take-out meal, buy a pair of shoes, or read a newspaper, and you're soon faced with a bewildering amount of garbage. The United States is the planet's number-one producer of trash. Each American throws out 4.5 pounds daily. But garbage is also a global problem. Today, the Pacific Ocean contains six times more plastic waste than zooplankton. How did we end up with this much rubbish, and where does it all go? Journalist and filmmaker Heather Rogers answers these questions by taking readers on a grisly and fascinating tour through the underworld of garbage. Gone Tomorrow excavates the history of rubbish handling from the nineteenth century to the present, pinpointing the roots of today's waste-addicted society. With a "lively authorial voice," Rogers draws connections between modern industrial production, consumer culture, and our throwaway lifestyle (New York Press). She also investigates the politics of recycling and the export of trash to poor countries, while offering a potent argument for change. "A clear-thinking and peppery writer, Rogers presents a galvanizing exposé of how we became the planet's trash monsters. . . . [Gone Tomorrow] details everything that is wrong with today's wasteful packaging, bogus recycling, and flawed landfills and incinerators. . . . Rogers exhibits black-belt precision." —Booklist, starred review

White Trash-Nancy Isenberg 2016 "A history of the class system in America from the colonial era to the present illuminates the crucial legacy of the underprivileged white demographic, citing the pivotal contributions of lower-class white workers in wartime, social policy, and the rise of the Republican Party"--NoveList.

Prison by Any Other Name-Maya Schenwar 2020-07-21 A crucial indictment of widely embraced "alternatives to incarceration" that exposes how many of these new approaches actually widen the net of punishment and surveillance "But what does it mean—really—to celebrate reforms that convert your home into your prison?" —Michelle Alexander, from the foreword Electronic monitoring. Locked-down drug treatment centers. House arrest. Mandated psychiatric treatment. Data-driven surveillance. Extended probation. These are some of the key alternatives held up as cost-effective substitutes for jails and prisons. But many of these so-called reforms actually widen the net, weaving in new strands of punishment and control, and bringing new populations, who would not otherwise have been subject to imprisonment, under physical control by the state. As mainstream public opinion has begun to turn against mass incarceration, political figures on both sides of the spectrum are pushing for reform. But—though they're promoted as steps to confront high rates of imprisonment—many of these measures are transforming our homes and communities into prisons instead. In Prison by Any Other Name, activist journalists Maya Schenwar and Victoria Law reveal the way the kinder, gentler narrative of reform can obscure agendas of social control and challenge us to question the ways we replicate the status quo when pursuing change. A foreword by Michelle Alexander situates the book in the context of criminal justice reform conversations. Finally, the book offers a bolder vision for truly alternative justice practices.

Garbage Can Lid-Scott Nelson 2019-10-24 On the mystical planet Vortex, the Nelson family resides in the rain forest of Humboldt County. Their sons, Scottie and Stephen, are identical twins who have very different views about their magical powers. Stephen believes his powers are in gold and surrounds himself with rings, coins, and other treasures to help him move items. But everything is about to change when the twins' uncle gives Scottie and Stephen a beautiful moon bird for their eleventh birthdays. The boys name the bird Sing Sing and they soon discover that the bird can talk.

While Sing Sing mesmerizes the boys with tales of magic and alchemy, he also tells them that through positive affirmations and the power of attraction, they have the ability within to harness fire, water, wind, the earth, and the magic of their words to manifest their destiny. As the twins are transported on a journey to unlock their hidden potential, they must learn all the skills to craft a new life for themselves while helping others in the process. Reclaiming the Discarded-Kathleen M. Millar 2018-02-06 In Reclaiming the Discarded Kathleen M. Millar offers an evocative ethnography of Jardim Gramacho, a sprawling garbage dump on the outskirts of Rio de Janeiro, where roughly two thousand self-employed workers known as catadores collect recyclable materials. While the figure of the scavenger sifting through garbage seems iconic of wageless life today, Millar shows how the work of reclaiming recyclables is more than a survival strategy or an informal labor practice. Rather, the stories of catadores show how this work is inseparable from conceptions of the good life and from human struggles to realize these visions within precarious conditions of urban poverty. By approaching the work of catadores as highly generative, Millar calls into question the category of informality, common conceptions of garbage, and the continued normativity of wage labor. In so doing, she illuminates how waste lies at the heart of relations of inequality and projects of social transformation.

Clean Ships, Clean Ports, Clean Oceans-Division on Engineering and Physical Sciences 1995-10-06 Marine debris is a serious environmental problem. To do its part, the United States has agreed to abide by the international treaty for garbage control at sea, known as MARPOL 73/78 Annex V. Clean Ships, Clean Ports, Clean Oceans explores the challenge of translating Annex V into workable laws and regulations for all kinds of ships and boats, from cruise ships to fishing crafts and recreational boats. The volume examines how existing resources can be leveraged into a comprehensive strategy for compliance, including integrated waste management systems and effective enforcement. Clean Ships, Clean Ports, Clean Oceans describes both progress toward and obstacles to Annex V compliance. The book covers How shipborne garbage originates and what happens to garbage discharged into the seas. Effects of discharge on human health, wildlife safety, and aesthetics. Differences in perspective among military, industrial, and recreational seafarers and shoreside facilities. Clean Ships, Clean Ports, Clean Oceans will be important to marine policymakers, port administrators, ship operations officers, maritime engineers, and marine ecologists.

Garbage Bag Suitcase-Shenandoah Chefalo 2016-02-02 Garbage Bag Suitcase is the true story of Shenandoah Chefalo's wholly dysfunctional journey through a childhood with neglectful, drug-and alcohol addicted parents. She endured numerous moves in the middle of the night with just minutes to pack, multiple changes in schools, hunger, cruelty, and loneliness. Finally at the age of 13, Shen had had enough. After being abandoned by her mother for months at her grandmother's retirement community, she asked to be put into foster care. Surely she would fare better at a stable home than living with her mother? It turns out that it was not the storybook ending she had hoped for. With foster parents more interested in the income received by housing a foster child, Shen was once again neglected emotionally. The money she earned working at the local grocery store was taken by her foster parents to "cover her expenses." When a car accident lands her in the hospital with grave injuries and no one came to visit her during her three-week stay, she realizes she is truly all alone in the world. Overcoming her many adversities, Shen became part of the 3% of all foster care children who get into college, and the 1% who graduate. She became a successful businesswoman, got married, and had a daughter. Despite her numerous achievements in life though, she still suffers from the long-term effects of neglect, and the coping skills that she adapted in her childhood are not always productive in her adult life. Garbage Bag Suitcase is not only the inspiring and hair-raising story of one woman's journey to over- come her desolate childhood, but it also presents grass-root solutions on how to revamp the broken foster care system.

Mediating Nature-Sidney I. Dobrin 2019-10-31 Mediating Nature considers how technology acts as a mediating device in the construction and circulation of images that inform how we see and know nature. Scholarship in environmental communication has focused almost exclusively on verbal rather than visual rhetoric, and this book engages ecocritical and ecocompositional inquiry to shift focus onto the making of images. Contributors to this dynamic collection focus their efforts on the intersections of digital media and environmental/ecological thinking. Part of the book's larger argument is that analysis of mediations of nature must develop more critical tools of analysis toward the very mediating technologies that produce such media. That is, to truly understand mediations of nature, one needs to understand the creation and production of those mediations, right down to the algorithms, circuit boards, and power sources that drive mediating technologies. Ultimately, Mediating Nature contends that ecological literacy and environmental politics are inseparable from digital literacies and visual rhetorics. The book will be of interest to scholars and students working in the fields of Ecocriticism, Ecomposition, Media Ecology, Visual Rehtoric, and Digital Literacy Studies.

Rubbish!-William L. Rathje 2001 It is from the discards of former civilizations that archaeologists have reconstructed most of what we know about the past, and it is through their examination of today's garbage that William Rathje and Cullen Murphy inform us of our present. Rubbish! is their witty and erudite investigation into all aspects of the phenomenon of garbage. Rathje and Murphy show what the study of garbage tells us about a population's demographics and buying habits. Along the way, they dispel the common myths about our "garbage crisis"—about fast-food packaging and disposable diapers, about biodegradable garbage and the acceleration of the average family's garbage output. They also suggest methods for dealing with the garbage we do have.

What the Victorians Threw Away-Tom Licence 2016-05-31 The people who lived in England before the First World War now inhabit a realm of yellow photographs. Theirs is a world fast fading from ours, yet they do not appear overly distant. Many of us can remember them as being much like ourselves. Nor is it too late for us to encounter them so intimately that we might catch ourselves worrying that we have invaded their privacy. Digging up their refuse is like peeping through the keyhole. How far off are our grandparents in reality when we can sniff the residues of their perfume, cough medicines, and face cream? If we want to know what they bought in the village store, how they stocked the kitchen cupboard, and how they fed, pampered, and cared for themselves there is no better archive than a rubbish tip within which each object reveals a story. A simple glass bottle can reveal what people were drinking, how a great brand emerged, or whether an inventor triumphed with a new design. An old tin tells us about advertising, household chores, or foreign imports, and even a broken plate can introduce us to the children in the Staffordshire potteries, who painted in the colors of a robin, crudely sketched on a cheap cup and saucer. In this highly readable and delightfully illustrated little book Tom Licence reveals how these everyday minutiae, dug from the ground, contribute to the bigger story of how our great grandparents built a throwaway society from the twin foundations of packaging and mass consumption and illustrates how our own throwaway habits were formed.

Engaging Public Sector Clients-John Alford 2009-04-08 Exploring three rich cases across three countries, this book shows how government organizations need their clients to contribute time and effort to co-producing public services, and how organizations can better elicit this work from them, by providing good client service and appealing to their intrinsic needs and social values.

Into our trash cans go dead batteries, dirty diapers, bygone burritos, broken toys, tattered socks, eight-track cassettes, scratched CDs, banana peels... But where do these things go next? In a country that consumes and then casts off more and more, what actually happens to the things we throw away? In Garbage Land, acclaimed science writer Elizabeth Royte leads us on the wild adventure that begins once our trash hits the bottom of the can. Along the way, we meet an odor chemist who explains why trash smells so bad; garbage fairies and recycling gurus; neighbors of massive waste dumps; CEOs making fortunes by encouraging waste or encouraging recycling-often both at the same time; scientists trying to revive our most polluted places; fertilizer fanatics and adventurers who kayak amid sewage; paper people, steel people, aluminum people, plastic people, and even a guy who swears by recycling human waste. With a wink and a nod and a tightly clasped nose, Royte takes us on a bizarre cultural tour through slime, stench, and heat-in other words, through the back end of our ever-more supersized lifestyles. By showing us what happens to the things we've "disposed of," Royte reminds us that our decisions about consumption and waste have a very real impact-and that unless we undertake radical change, the garbage we create will always be with us: in the air we breathe, the water we drink, and the food we consume. Radiantly written and boldly reported, Garbage Land is a brilliant exploration into the soiled heart of the American trash can.

Trust Me-Nick Morgan 2008-12-16 Nick Morgan shows how anyone can be an effective speaker by presenting an image of authenticity and respect for their audience, whether in a group presentation or a one-on-one conversation. He presents a four-step process, perfected in his teaching at Harvard, that enables the reader to use their own personal speaking style while becoming a more persuasive and charismatic communicator and leader. The basis of this process is the fact that when words and body language are in conflict, body language wins every time. This isn't easy to overcome, because normally body language is immediate, while the words lag slightly behind, and even a momentary conflict is perceptible to the audience. The key to success is to train your body language to unconsciously align with your message. The four steps: Form the attitude and intent to be open, and then let your body naturally express that intent. This feeling of openness will naturally affect the content of what you are saying, and it's that natural evolution that is at the heart of the process. Become connected to your audience. This creates a mutual energy, and you will naturally begin to think in terms of what the audience wants and needs in shaping your content. Ask yourself, what's my underlying emotion? Why does this matter to me? Becoming passionate about what you have to say naturally makes your audience care about it too. Really listen to the audience. Understanding their needs and reactions will enable you to direct your communication in mutually beneficial ways.

Callous Objects-Robert Rosenberger 2017-12-15 Uncovering injustices built into our everyday surroundings Callous Objects unearths cases in which cities push homeless people out of public spaces through a combination of policy and strategic design. Robert Rosenberger examines such commonplace devices as garbage cans, fences, signage, and benches—all of which reveal political agendas beneath the surface. Such objects have evolved, through a confluence of design and law, to be open to some uses and closed to others, but always capable of participating in collective ends on a large scale. Rosenberger brings together ideas from the philosophy of technology, social theory, and feminist epistemology to spotlight the widespread anti-homeless ideology built into our communities and enacted in law. Forerunners: Ideas First is a thought-in-process series of breakthrough digital publications. Written between fresh ideas and finished books, Forerunners draws on scholarly work initiated in notable blogs, social media, conference plenaries, journal articles, and the synergy of academic exchange. This is gray literature publishing: where intense thinking, change, and speculation take place in scholarship.
