Ubuntu Linux for Non-geeks-Rickford Grant 2006 This newbie's guide to Ubuntu lets readers learn by doing. Using immersion-learning techniques favored by language courses, step-by-step projects build upon earlier tutorial concepts, stimulating the brain and increasing the reader's understanding. It also covers all the topics likely to be of interest to an average desktop user, such as installing new software via Synaptic; Internet connectivity; working with removable storage devices, printers, and scanners; and handling DVDs, audio files, and even iPods. It also eases readers into the world of commands, thus allowing them to work with Java, Python or other script-based applications; converting RPMs to DEB files; and compiling software from source.

The Linux Command Line-William E. Shotts, Jr. 2012 You've experienced the shiny, point-and-click surface of your Linux computer—now dive below and explore its depths with the power of the command line. The Linux Command Line takes you from your very first terminal keystrokes to writing full programs in Bash, the most popular Linux shell. Along the way you'll learn the timeless skills handed down by generations of gray-bearded, mouse-shunning gurus: file navigation, environment configuration, command chaining, pattern matching with regular expressions, and more. In addition to that practical knowledge, author William Shotts reveals the philosophy behind these tools and the rich heritage that your desktop Linux machine has inherited from Unix supercomputers of yore. As you make your way through the book's short, easily-digestible chapters, you'll learn how to: \* Create and delete files, directories, and symlinks \* Administer your system, including networking, package installation, and process management \* Use standard input and output, redirection, and pipelines \* Edit files with Vi, the world's most popular text editor \* Write shell scripts to automate common or boring tasks \* Slice and dice text files with cut, paste, grep, patch, and sed Once you overcome your initial "shell shock," you'll find that the command line is a natural and expressive way to communicate with your computer. Just don't be surprised if your mouse starts to gather dust. A featured resource in the Linux Foundation's "Evolution of a SysAdmin"
