Prey is the classic Klingon starship—a tough raiding and scouting vessel that has served at the heart of the Klingon Defense Force for more than a hundred years. Life on board is harsh and brutal, with any sign of weakness leading to a challenge to the death. The ship itself is stripped back and lean, with everything designed for a single purpose—war. This Haynes Manual traces the origins of a Bird-of-Prey from the moment it is commissioned by one of the Great Houses and constructed at the shipyards of the Klingon Naval Academy. It then proceeds to examine General Martok’s famous ship the I.K.S. Rotarran in unprecedented detail. Featuring a stunning cutaway drawing and, for the first time ever, detailed deck plans and incredible new computer-generated artwork, the Haynes Bird-of-Prey Manual is a technical tour of the ship’s systems, from the bridge and engineering rooms to the disruptors, torpedo launcher, and the all-important cloaking device. In addition, the Manual provides a unique insight into life on board a Klingon ship and the Rotarran’s glorious history in the Dominion War. This Haynes Manual is fully authorized by CBS. All the new artwork has been designed by STAR TREK: THE NEXT GENERATION and STAR TREK: VOYAGER’s senior illustrator Rick Sternbach, who is the world’s leading expert on STAR TREK technology, with CG renders produced by STAR TREK VFX artist Adam ‘Mojo’ Lebowitz.

NASA/ESA/ASI Cassini-Huygens-Ralph Lorenz 2017-05-11 The descent of the Huygens probe to the frozen surface of Saturn's moon, Titan, in 2005, marks a pinnacle achievement in space exploration - the most distant planetary landing ever made or presently foreseen. The Huygens probe's seven-year voyage through space (past Venus, Earth and Jupiter) attached to the Cassini orbiter, its arrival at Saturn and three-week dormant coast to Saturn's moon, Titan, culminated in Huygens' hypersonic entry into Titan's atmosphere, 2.5-hour parachute descent, and continued operation for 72 minutes on the surface transmitting data back to Earth via the Cassini orbiter. Saturn has 62 confirmed orbiting moons, but Titan (which is larger than the planet Mercury) was chosen as a has two major components of Earth's atmosphere - nitrogen and oxygen - but the oxygen is was thought to be frozen as water ice within the
