Computer Network Security and Cyber Ethics, 4th ed.-Joseph Migga Kizza 2001-10-15 In its 4th edition, this book remains focused on increasing public awareness of nature and motives of cyber vandalism, the weaknesses inherent in cyberspace infrastructure, and the means available to protect ourselves and our society. The new addition aims to integrate security education and awareness with morality and ethics. In all, the security of information in general and of computer networks in particular, on which our national critical infrastructure and, indeed, our lives depend, is based squarely on the individuals who build the hardware and design and develop the software that run the networks that store our vital information. Addressing security issues with ever-growing social networks are two new chapters: "Security of Mobile Systems" and "Security in the Cloud Infrastructure."

Diversity, Oppression, and Social Functioning-George A. Appleby 2011 Using the "Person-In-Environment" (PIE) theoretical framework, this diversity practice text teaches students how to think about their personal reactions and assumptions about diversity and what constitutes cultural competent "assessment" and "intervention" when working with a broad range of diverse populations. The diverse populations presented in the text are described within an ecological, strengths perspective. The authors' thesis is that, in order to work effectively with diverse populations, it is necessary to take into consideration the complex dynamics of social functioning and social oppression. The "Person-In-Environment" theoretical framework provides a basis for analysis of the social, economic, and political reality of these diverse populations. The text presents an affirmative practice approach and builds on the available diversity practice literature. This text can be used in diversity practice courses, courses on working with oppressed populations, and other practice courses (such as advanced practice) that focus on diversity issues.

A Survey on Today's Smartphone Usage-Tobias Himmelsbach 2013-09 Diploma Thesis from the year 2011 in the subject Computer Science - Miscellaneous, grade: 2,3, Technical University of Berlin (Agententechnologien in betrieblichen Anwendungen), language: English, abstract: The smartphone market is evolving rapidly, irrespective of the well-known spread within the business sector. In recent years the average users tend to replace their traditional mobile phones, PDAs and Palms with smartphones. These devices have become a pervasive part of everyday life. Dealing with huge amounts of data, the mobile device's and application's demand for certain security standards cannot be underestimated. In recent studies the individual user's needs in terms of technical features, applications etc. have not been addressed and analyzed properly. To capture the problem in its full extent it is vital to understand the user's expectations.

Besides, the usage patterns have to be described especially against the background of security aspects. As mentioned before, recent analyzes did not specifically ask what the user expects from a smartphone. Hence, the main objective of this work is to get a broad picture on how smartphones are used today and what users expect, taking into consideration security aspects.. An international web-based online survey was designed and performed to measure and analyze users' behaviour when using smartphones, with the aim of finding out what they want and expect from a smartphone. The main goals were to identify user needs in the context of smartphones, to analyze their knowledge and acquisition to security aspects and to get significant data about the user's behaviour. The main findings of the survey are that on the one hand, most of the users want a smartphone to provide classic mobile phone features, such as performing phone calls, writing messages or storing contacts. On the other hand they want a smartphone to provide mobile internet acce
